McKees Rocks Community Development Corporation

This internship is a chance for individuals to learn the soft skills of leadership, teaching, and organization, as well as a chance to advance technical skills associated with community development and social outreach.

McKees Rocks CDC is working on a residential revitalization plan. In a community such as ours we have found there are many issues affecting our town and its residents. Working with the residents and reaching out to help them will be our strategy for 2016. Connecting the residents with the correct resources for whatever challenges they are facing, such as housing issues, job/work ready programs, or connecting them with training and education programs available locally.

To achieve these goals it will be pertinent to go out to the neighborhoods where our citizens reside. Taking the time to talk with and listen to the people and hear what challenges they are facing and create an individual path to lead them to a happier, healthier safe existence within the community. This will be a vast undertaking but one we believe will help build a stronger more livable Sto-Rox community.

This all happens within the unique setting of a McKees Rocks a local Community. The applicant should be prepared to work with people of all ages and skills. These could range from a child looking for a mentor to a retired resident who has much to offer and everyone in between.
