Child Welfare Education and Research Programs

Annual Report

of the

Child Welfare Education for Baccalaureates Program (CWEB)

and the

Child Welfare Education for Leadership Program (CWEL)

July 1, 2020- June 30, 2021

The Child Welfare Education and Research Programs are a collaborative effort of the University of Pittsburgh, School of Social Work, the Pennsylvania Department of Human Services, and the Pennsylvania Children and Youth Administrators.

Greetings

From the Dean
The School of Social Work has a longstanding commitment to children, youth, and families and to the professional development of the child welfare workforce. The first child and family-focused courses were offered over 100 years ago, shortly after the formation of the U.S. Children’s Bureau. Since that time, the School of Social Work has been at the forefront of child welfare studies. We recognize that the core of child welfare work involves protecting children, as well as providing support to families and communities, and that a social work education is the best preparation for the complexity of the job. Our ongoing efforts to enhance the public child welfare workforce through professional social work education are highlighted in each annual report of the Child Welfare Education for Baccalaureates (CWEB) and the Child Welfare Education for Leadership (CWEL) programs. This edition describes the work of the twentieth year of the CWEB program and twenty-six years of the CWEL program. This sustained commitment by the Department of Human Services and the University assures that Pennsylvania remains a national leader in child welfare education, training, organizational development, and practice improvement.

The School of Social Work is committed to excellence in child welfare education, training, and research. We thank the Pennsylvania Department of Human Services and the Pennsylvania Children and Youth Administrators for their steadfast support and partnership in public child welfare workforce development. Our work together remains critical to preparing social work professionals to meet the challenges of our economic, social, and political landscape.

Elizabeth M.Z. Farmer, Ph.D.
Dean, School of Social Work

From the Principal Investigator
We are proud of the achievements of the CWEB and CWEL programs and the contributions we continue to make to the public child welfare system in Pennsylvania through workforce development, best practice, and continuous quality improvement. The past year has been full of persistent challenges to the physical, psychological, economic, and social health of our nation. Long-standing issues of racial inequity, systemic racism, and oppression have garnered long overdue attention and focus. Socioeconomic disparities have become painfully apparent as we continue to navigate the pandemic. Vulnerable children and families have faced yet more disadvantage related to basic needs, access to education and healthcare, affordable housing, and safe, stable employment. Throughout these challenging times, our child welfare workforce has shown resilience, perseverance, and determination. The essential work of child welfare requires a competent, well-prepared, and well-supported workforce to address the complex needs of children and families.

At this time, one thousand three hundred (1,300) CWEB students have entered the county agency system and one thousand five hundred and forty-one (1,541) students have graduated from the CWEL program. During the current academic year, approximately 203 CWEB and CWEL participants are engaged in social work studies. It is to Pennsylvania’s credit and the University of Pittsburgh’s leadership that a pathway of professional education has been available to our public child welfare workforce for over a quarter of a century. We extend sincere thanks to our partnering schools, the county child welfare agencies, and the Office of Children, Youth and Families for their continued dedication to workforce development. Together, we continue to prepare and support exemplary child welfare professionals who perform demanding, fulfilling, and essential work.

Helen Cahalane, Ph.D., ACSW, LCSW
Principal Investigator
Child Welfare Education for Baccalaureates

And

Child Welfare Education for Leadership

Mission and Goals

Our Mission

The Child Welfare Education and Research continuum includes two distinct degree education programs, Child Welfare Education for Baccalaureates (CWEB) and Child Welfare Education for Leadership (CWEL). Administered by the University of Pittsburgh, School of Social Work in partnership with the Pennsylvania Department of Human Services, Office of Children, Youth and Families, and the Pennsylvania Children and Youth Administrators, the mission of these programs is to strengthen child welfare services to Title IV-E eligible children and families in Pennsylvania by increasing the number of educated professionals and equipping them to deal with the increasingly complex demands of public child welfare practice.

Our Goals

- Addressing the vacancy and turnover rates among public child welfare employees and the recruitment and retention problems in the Pennsylvania child welfare workforce;
- Recruiting undergraduate students throughout the widely dispersed locations to prepare persons for public child welfare employment;
- Assisting in the retention of public child welfare staff already serving Title IV-E eligible children and families by making graduate education with a focus on child welfare studies more readily available;
- Providing academic and curricular support for child welfare studies to university programs;
- Providing a career ladder within public child welfare and assisting in the long-term career development of child welfare professionals;
- Engaging in efforts to promote the development of knowledge and skills in evidenced-based practice for child welfare professionals;
- Conducting research and evaluation focused on evidence-based child welfare practice and the impact of social work education; and
- Advocating for practice improvement within the child welfare system through education, ongoing training, transfer of learning, technical assistance, organizational development, and support provided by competent, committed, and confident child welfare professionals.
Introduction

Recruitment and retention of public child welfare personnel has been recognized as a problem not only in Pennsylvania, but nationwide for more than two decades. National studies have concluded that “insufficient training” is among the factors contributing to the difficulties in retaining child welfare personnel. Research findings document that professional education is one of the strategies within a comprehensive, system-wide intervention that can reduce turnover, improve services, and reduce costs.

This report marks the completion of the twentieth (20th) full academic year of operation for the Child Welfare Education for Baccalaureates (CWEB) program and twenty-sixth (26th) full academic year of operation for the Child Welfare Education for Leadership (CWEL) program in Pennsylvania. Both have become remarkably integrated into the fabric of public child welfare throughout the state, with 99% of counties in the Commonwealth participating in CWEB and CWEL. For the past 26 years, CWEL has been returning graduates to over 3,475 caseworker positions* in Pennsylvania’s county child welfare agencies, while CWEB has been preparing graduates to enter the child welfare field over the past 20 years. At the present time, over 27% of the state’s public child welfare casework positions are occupied by a CWEB graduate, a CWEL graduate, or a currently enrolled CWEL student. CWEB and CWEL graduates and current CWEL students also occupy supervisor, manager, and administrator positions across the Commonwealth. There are many factors to be included when addressing morale, recruitment, and retention problems. As a key intervention strategy, the CWEB and CWEL continue to demonstrate their effectiveness in addressing the significant issue of preparatory and advanced education for the child welfare workforce. (*Figure based on SFY 20/21 workforce data.)

The need for both the baccalaureate and graduate-level child welfare education programs is described and their basic designs are included in Pennsylvania’s federally approved Title IV-B plan. Federal financial participation is based upon federal Title IV-E regulations contained in 45 CFR, Ch. II, Part 235 and Ch. XIII, Parts 1355 and 1356.
**Background**

Child welfare has been a vital component for social work practice at the University of Pittsburgh since as early as 1917. The following timeline provides an historical overview of key events in the University’s legacy of child welfare education and training.

| 1938-1971 | - The School of Social Work continues classroom courses and field placements related to children, child welfare and child development.  
- One of the first multidisciplinary teams focused on child protection is established at Children’s Hospital of Pittsburgh in the late 1950s-early 1960s, with which the School of Social Work is closely affiliated.  
- University of Pittsburgh becomes part of the Commonwealth System of Higher Education in 1966. |
| 1971 | School of Social Work receives the first of an uninterrupted number of federal, state and foundation child welfare training grants that continues to the present. |
| 1972 | Children and Youth Concentration is introduced at the master’s level and becomes a curriculum model adopted by other schools of social work across the country. |
| 1986 | Three-year grant received from the National Center for Child Abuse and Neglect to establish the Interdisciplinary Child Abuse and Neglect training program. |
| 1991 | Five-year competency-based, interdisciplinary training grant received from the United States Children’s Bureau to advance the Title IV-B interdisciplinary agenda of building a child welfare curriculum, enhancing school/agency partnerships, and providing training at both the undergraduate and graduate levels. Faculty members from Child Development and Child Care, Nursing, Medicine, Law, Psychology, Public Health, and Social Work participate as a team. |
| 1992 | Title IV-E pilot projects initiated with several Western PA counties to assist in developing a Title IV-E training model to address child welfare workforce issues and shape the School’s curriculum. |
| 1995 | The Child Welfare Education for Leadership (CWEL) program is established to provide long-term educational opportunities for public child welfare employees in PA. |
| 1998 | Funding received from the United States Children’s Bureau for a two-year project designed to demonstrate the efficacy of developing a state-wide opportunity for potential child welfare employees (“persons preparing for employment” in the federal Title IV-E regulations). |
| 2001 | - The Child Welfare Education for Baccalaureates (CWEB) program initiated to provide child welfare education and training to persons preparing for a child welfare career.  
- School of Social Work assumes leadership and administrative responsibility for Pennsylvania’s Child Welfare Training Program providing pre-service and in-service training to all public child welfare employees and many private agencies. |
| 2003 | Pennsylvania’s child welfare training and education model acknowledged as being “…the most comprehensive, integrated and sophisticated program seen to date” by the Administration for Children and Families. |
| 2004 | Pennsylvania’s child welfare education and training programs described as an outstanding model for other states to emulate by the Administration for Children and Families. |

---

Pennsylvania Child Welfare Training Program receives the National Staff Development and Training Association (NSDTA) Quality Award.

CWEB program graduates its 500th MSW recipient

- School of Social Work receives its 110th grant of external funding since 1971, expressly for child welfare education training, research, faculty development and curriculum development.
- CWEB, CWEL and the PA Child Welfare Training Program (CWTP) highlighted as one of Pennsylvania’s key strengths during the second round of the CFSR.
- CWEB program graduates its 500th BSW/BASW recipient

Pennsylvania begins a two-year effort to improve the Commonwealth’s child protection laws. First meeting of the PA Task Force on Child Protection (“Task Force”) held in January ³. Testimony provided to the Task Force by University child welfare faculty in May ⁴.

- The PA Child Welfare Training Program receives the Academic Excellence Award from the American Public Human Services Association.
- CWEL graduates its 1000th MSW recipient.
- CWERP PI receives the NSDTA Career Achievement Award.
- PA Child Welfare Resource Center (CWRC) officially changes its name.

2012

- CWERP continuum highlighted in NASW publication highlighting the 100th anniversary of the Children’s Bureau⁵.

- Governor Tom Corbett signs 10 child protection bills into law, the first pieces of a comprehensive legislative package for PA’s children and following the recommendations of the Task Force. Signing event held at the Pennsylvania Child Welfare Resource Center⁶.

2013

On-line course, Recognizing and Reporting Child Abuse: Mandated and Permissive Reporting in Pennsylvania, publicly released by the Child Welfare Resource Center (www.reportabusepa.pitt.edu)

2014

- Professional development series, Trauma-Informed Principled Leadership, initiated with Bloomsburg University and University of Pittsburgh CWEB students.

- CWEB program graduates its 1000th BSW/BASW recipient

2015

- 1st Annual Pamela J. Cousins Excellence in Social Work Award established at the University of Pittsburgh-Bradford.

- Testimony on child welfare workforce development provided to the PA House Children & Youth Committee

- CWERP provides national briefing on workforce development in Washington, DC.

Program Descriptions

Child Welfare Education for Baccalaureates Program

Designed to recruit and prepare students for a career in public child welfare, the Child Welfare Education for Baccalaureates (CWEB) Program is offered to undergraduates at 15 schools throughout Pennsylvania. Undergraduate students who are official social work majors in any of the 15 approved schools are eligible to apply for the CWEB program. Figure 1 below illustrates the program requirements.

Figure 1. Child Welfare Education for Baccalaureates Requirements
Qualified students can receive substantial financial support during their senior year in return for a commitment to work in one of Pennsylvania’s county public child welfare agencies following graduation. Students must satisfactorily complete child welfare course work and an internship at a public child welfare agency. During the internship, most students complete a substantial portion of the competency-based, foundational training required for all public child welfare caseworkers. Upon graduation, students also receive assistance with their employment search.

To date, 1,300 students have graduated from CWEB during the program’s first 20 years. CWEB graduates have completed internships and obtained employment in 93% of Pennsylvania counties. Once on the job, they can draw from their educational preparation, skill-based training, and internship experience. County child welfare agencies benefit immensely from the program because it addresses a critical child workforce need by providing skilled, entry-level social workers who come to the field with a combination of academic knowledge and exposure to child welfare practice. Figure 2 below illustrates CWEB admissions by gender.

Figure 2. Admissions to CWEB by Gender
Child Welfare Education for Leadership Program

For current employees of public child welfare agencies, the Child Welfare Education for Leadership (CWEL) Program provides substantial financial support for graduate-level social work education. Caseworkers, supervisors, managers or administrators of any Pennsylvania county children and youth agency are eligible to apply to participate in the CWEL program. See Figure 3 below for all program requirements. All persons enrolled meet these criteria as determined by their CWEL applications, resumes, personal statements, agency approvals, admission to one of the approved schools, and signed agreements.

CWEL has funded students from 64 counties and twelve Pennsylvania schools of social work on both a full and part-time basis. At the present time, 21% of the Pennsylvania child welfare workforce consists of a CWEL graduate or a current CWEL student. Additionally, CWEL serves as an educational and career ladder for public child welfare employees. Overall, approximately 16% of CWEB graduates have entered the CWEL program thus far. CWEB alumni made up 10% of the active CWEL student enrollment during the 2020-2021 program year.

Figure 3. Child Welfare Education for Leadership Requirements
CWEL reimburses salary and benefits for full-time CWEL students and covers tuition, fees, and other expenses for both full and part-time students in return for a commitment to the employing child welfare agency upon graduation. During the first 26 years of the program, 1,541 child welfare professionals have earned graduate social work degrees. These individuals occupy various positions, ranging from caseworker to administrator. The program has a remarkably successful record of retention, with annual retention rates averaging 91%. Admission trends by gender and by enrollment status are shown in Figures 4 and 5 below.

**Figure 4. Admissions to CWEL by Gender**

![Admissions to CWEL by Gender](image1)

**Figure 5. Admissions to CWEL by Enrollment Status**

![Admissions to CWEL by Enrollment Status](image2)
Racial Disproportionality in Child Welfare and CWEB/CWEL Enrollment

We are committed to understanding and addressing issues of racial equity and social justice, especially as it relates to the child welfare system. Given the long-standing impact of racism and societal injustice in the lives of black and brown persons, in particular, it is crucial to dismantle the ways in which race is intertwined in all levels of child welfare services. Throughout child welfare and other related fields, the terminology used to define and describe concepts related to race and ethnicity may vary. Please see the terms and definitions below that are used in this report.

Disproportionality: The overrepresentation or underrepresentation of a racial or ethnic group compared with its percentage in the total population.

Racial Disparity: The unequal outcomes of one racial or ethnic group compared with outcomes for another.

Race Equity: Equity involves trying to understand and give people what they need to enjoy full, healthy lives.\(^8\)

Racism: The systematic discrimination directed against minority or marginalized groups.

Cultural humility: A process of reflection and lifelong inquiry, involving self-awareness of personal and cultural biases as well as awareness and sensitivity to significant cultural issues of others.

Cultural responsiveness: The ability to adapt one’s behavior to the cultural needs of others. Families/children of diverse racial and ethnic backgrounds: Families or children whose race or ethnicity is other than non-Hispanic, White only (e.g., African American, Hispanic, American Indian or Alaska Native).\(^9\)

---

\(^8\) National Conference of State Legislatures. (2021, January 26). Disproportionality and race equity in child welfare.

It is well known that children of color are overrepresented in the United States child welfare system\textsuperscript{10}. For example, in 2020, African American children made up approximately 14% of the U.S. child population but represented 23% of the foster care population\textsuperscript{11,12}. Disproportionate representation is striking across all levels of child welfare service and is particularly evident in substitute care. Pennsylvania is the fifth most populated state in the country, with approximately 12.8 million people\textsuperscript{13}. According to a recent report by Pennsylvania Partnerships for Children, there were 21,689 Pennsylvania children living in foster care in 2020 \textsuperscript{14}. Black children and children of multiple races were placed in foster care 2x the rate of the general population\textsuperscript{14}. When looking at re-entry into foster care, Black children were more than 5x more likely to re-enter foster care and children of two or more races were more than 3.5 more likely to re-enter foster care when compared to White children\textsuperscript{14}.

While the solutions for the disproportionate representation of children of color in the child welfare system are complex, we recognize that it is crucial for the workforce to be reflective of the populations served. Thus, engaging a diverse student body into child welfare studies and supporting that workforce in developing both practice and leadership skills is fundamental to developing and sustaining a diverse child welfare workforce that demonstrates cultural humility and cultural responsiveness. Child welfare workers who understand, appreciate and/or share in the background, culture, language, and customs of a family are better equipped to holistically

understand a family’s needs and appropriately provide services that will facilitate better outcomes. As a case in point, a recent study of practice in two county-administered child welfare systems illustrated the significance of workforce diversity in reducing racial disparity in child welfare removal decisions. This work built upon previous studies illustrating the potential benefit to family outcomes when caseworkers were working with clients who had similar ethnic backgrounds and highlighted the importance of considering familial and cultural norms in relation to child maltreatment and family dynamics. Additionally, the study affirmed the need for all child welfare professionals to examine their own biases and how they may contribute to racial disparity in their decision-making processes. With respect to workforce composition, the authors also noted that while workforce diversity is a first step, adequate training and skill development must follow to fully realize the benefits of a diverse staff.

Within the CWEB and CWEL programs combined, Non-Hispanic Black students represent 20% of participants. Figure 6 illustrates the demographic characteristics of the Pennsylvania child population and those of CWEB/CWEL participants.

---

While CWEL students are recruited into the program through their county agencies, CWEB students are recruited from the general population of our partnering Schools of Social Work. Thus, this arrangement provides us the opportunity to work with our schools in developing and implementing strategies that will help facilitate the recruitment of diverse students into the CWEB program. When we engaged our partnering schools in recruiting more diverse students into CWEB, many of the strategies involved open information and communication about the program. This was accomplished by providing information about the CWEB program when students apply to their school, disseminating information at college fairs, and focusing outreach on junior-level students. One school described intentional advertising and recruiting by other diverse faculty and staff. Other schools are in communication with local community colleges as part of their recruitment strategy. Among their suggestions for increasing diversity in recruitment, school partners recommended having diverse speakers talk about child welfare and act as potential mentors to CWEB students. Additional compensation for bilingual students to help offset the added
responsibilities asked of these graduates was suggested. As we move forward, it remains important to continue collaboration with our partnering Schools of Social Work and employ effective strategies to facilitate the recruitment of diverse child welfare students. We address a pending opportunity to better recruit a more diverse student body in the next section.

**Administration**

The CWEB and CWEL programs have been administered by the School of Social Work at the University of Pittsburgh since their inception in 2001 and 1995, respectively. Part III-A of the Project Description and Implementation provides background information. In addition to providing undergraduate and graduate level social work degree programs on both a full-time and part-time basis, the School of Social Work provides academic and curriculum support for the other 14 undergraduate universities and 11 graduate schools eligible to participate in the CWEB and CWEL programs. The total number of participating school programs is 17, with 5 schools at the undergraduate level only, 10 university programs enrolling both undergraduate and graduate students, and two programs at the graduate level only.

The most recent addition to our school consortium was East Stroudsburg University who joined the CWEB program in the 2018-2019 academic year after receiving full accreditation by the Council on Social Work Education (CSWE). At present, two partnering universities are in the process of establishing an accredited MSW program. These are Slippery Rock University (currently in Candidacy) and Bloomsburg University (currently in Pre-Candidacy). Candidacy is typically a three-year process involving program self-studies, site visits, and reviews by the CSWE Commission on Accreditation. A program is considered for Pre-Candidacy after submission of an application and receipt of approval to move forward with a fuller review within one year. We will explore inviting these MSW programs to join the CWEL consortium when each achieves its full accreditation.
A major change within the landscape of higher education in Pennsylvania warrants discussion. At the conclusion of the 2020-2021 academic year, the PA State System of Higher Education (PASSHE) announced the plan for system redesign of its existing 14 State System universities. (See https://www.passhe.edu/SystemRedesign/Pages/redesign.aspx). Driven by interrelated issues of cost containment, decreasing enrollment, and a declining state allocation, unanimous approval was received by the PASSHE Board of Governors in July of 2021 to integrate six universities into two distinct entities. This followed the passage of Act 50 of 2020 by the PA General Assembly (signed into law in June 2020) which provided the statutory authority to restructure the State System’s educational institutions. These restructured entities include California University, Clarion University, and Edinboro University in the west; Bloomsburg University, Lock Haven University, and Mansfield University in the northeast. The strategic plan includes a single president/leadership team for each new entity, as well as a single faculty, budget, enrollment management system (including a single application process), human resources, and technology. Full integration of curriculum is targeted for fall 2024.

Five of the six PASSHE universities to be integrated are long-standing members of the CWEB/CWEL school consortium. The pending integration provides an opportunity to strengthen the existing partnership that exists and offers advantages for recruitment, a unified geographic range, and coordination among relatively small social work programs. There is also an opportunity for recruitment of a more diverse student population at the undergraduate (CWEB/preparing for employment) level. The northeastern PASSHE universities (Bloomsburg, Lock Haven and Mansfield) are among 15 institutions selected by the American Association of State Colleges and Universities to participate in the newly launched Transformation Accelerator Cohort. This initiative is funded by the Bill and Melinda Gates Foundation to help eliminate race, ethnicity, and income as predictors of student success. The focus is specifically on parity in student outcomes among Black, Latinx, Indigenous and low-income students. The integrated Bloomsburg-Lock Haven-Mansfield program entity will join university participants representing the rural, urban, and
suburban areas across the country that include seven Hispanic-serving Institutions (HSIs), three Historically Black colleges and universities (HBCUs) and Predominantly Black Institutions (HPIs), and three Asian America and Native American-Pacific Islander serving Institutions (AANAPISIs). The disproportionate representation of Black and Brown children in the child welfare system, along with the disproportionate representation of Black and Brown individuals in the child welfare workforce, are well-known issues that demand attention. It is hoped that we will be able to leverage the opportunity provided through the intersectional lens of our partners in the northeast region as they adopt best practices for closing equity gaps for underrepresented students and that a career in public child welfare can be one of those solutions for Pennsylvania.

The CWEB and CWEL faculty conduct annual site visits with each approved university program, including branch campus locations, and maintain ongoing contact to discuss academic programs, issues, and progress. The legal agreement for each student contains a Family Educational Rights and Privacy Act (FERPA) waiver which permits the sharing of academic information. The CWEB and CWEL faculty and staff have hundreds of contacts with faculty and students from the other fifteen schools throughout the year and provide instruction and academic advisement within the School of Social Work to University of Pittsburgh students.

Fiscal administration includes reimbursement to county employers of full-time graduate students for salaries and benefits, reimbursement to students for books, payment of tuition and fees at all approved educational institutions and, where appropriate, travel expenditures and fellowship payments. These payments are advanced by the University as they become due. The University, in turn, invoices the Commonwealth and is reimbursed from a combination of state and federal funds.

A series of formal agreements provides the mechanism for the operation of the programs. These include the Intergovernmental Agreement between the Department of Human Services and the University of Pittsburgh; a series of agreements between the University and each of the other
16 approved institutions of higher education; and agreements between CWEB students with the University or among CWEL students, their respective county employer, and the University. These agreements provide for the students’ enrollment arrangements, reimbursement for allowable expenses, and the required post-education work commitments. The CWEL employers’ responsibility to maintain benefits and grant education leave to full-time students is specified in the agreement. Reimbursement to employers for CWEL student salaries and benefits is also included.

To accomplish these tasks, approximately nine full-time equivalent faculty and staff have been engaged. All program faculty teach regular credit courses, provide academic advising to students, and oversee internships. In addition, the CWEB and CWEL faculty are responsible for assisting in program evaluation. The faculty and staff listing are contained in Appendix M.

**Academic Program Approval and Curriculum**

All the schools participating in the CWEB and CWEL programs are fully accredited by both the Middle States Association of College and Schools (MSACS) and the Council on Social Work Education (CSWE). The 17 approved schools and their accreditation dates are listed in Appendix A, Table I. A graphic representation showing the location of the participating schools is included in Appendix B.

All approved undergraduate schools are required to offer at least one child welfare course and internships in county child welfare agencies. Approved graduate programs are required to offer at least two graduate-level child welfare courses and child welfare-focused internships. The continuing availability of these courses and internships is verified by the CWEB and CWEL Academic Coordinators who consult regularly with the approved schools regarding field assignments, specific courses, student registrations, and student progress.

The graduate level offerings of the University of Pittsburgh and their enrollments are listed in Appendix C, Table II. The 2020-2021 course offerings of the 15 undergraduate schools
participating in CWEB and the other 11 graduate school programs participating in CWEL and shown in Appendix D, Table III (CWEB) and in Appendix E, Table IV (CWEL). These course listings referenced above do not include internships, for which a minimum of 400 clock hours is required at the baccalaureate level and 900 at the master’s level.\(^{18}\)

At the undergraduate level (CWEB) the range of field or internship hours is from 400 to 600 with a mean of 475. However, the CWEB students are strongly encouraged to participate in the Pennsylvania State Civil Service County Social Casework Intern program in conjunction with their school and the county agency in which they are completing their placements. This option requires 975 hours of internship\(^ {19}\). The advantage of this option for the student and agency is that upon completion of the official County Social Casework Intern program and graduation, the student is eligible to begin work immediately in the agency, typically as a Caseworker II, without the requirement of a Civil Service examination. Of the 49 CWEB students who graduated during the 2020-2021 academic year, 34 (69\%) exercised the State Civil Service Social Casework Intern option. CWEB county participation is included in Appendix F.

At the graduate level, nearly all placements exceed the 900-hour minimum with the average being over 1,000 hours. At the University of Pittsburgh, there are 360 hours of internship for first year students, in addition to a 15-week field seminar. Second year students are required to complete 720 hours, resulting in a grand total of 1,080 internship hours. Comparable hours and field seminars are required at the other participating graduate school programs. CWEL county participation is included in Appendix H, Chart 8.

\(^{18}\) Internship hours were reduced by the Council on Social Work Education in the spring of 2020 due to the disruption caused by the pandemic and will remain reduced through summer 2022 (undergrads = 340 hours minimum; graduate = 765 hours minimum).

\(^{19}\) The Department of Administration within PA DHS reduced the minimum amount of internship hours for SCS County Social Casework Interns to 730 hours effective spring 2020 through summer 2021 due to the pandemic.
Commitment and Recoupment of Funds

All students enrolled in the CWEB and CWEL programs must repay the educational benefits they have received. This is accomplished in one of two ways. For CWEB graduates, the repayment by service is one calendar year of service for one academic year of support\(^{20}\). For CWEL graduates, the length of this service is an amount of time equal to the length of the educational leave for full-time CWEL students and equal to the proportion of the full-time length of the degree program they have completed as part-time students\(^{21}\). Students who received support for only a portion of their program have a pro rata work commitment proportional to the support they received. During the period of this report, 47 CWEL students completed their degree programs and graduated. All graduates returned to their counties of origin following graduation.

The full amount of the cash paid to the student or on the student’s behalf must be reimbursed whenever a CWEB or CWEL graduate fails to complete his or her commitment. This provision is contained in the agreement each student signs either with the University (as in the case of CWEB students) or with the University and county of origin (as in the case of CWEL students). During the 2020-2021 program year, fourteen CWEB students withdrew or were terminated from the program after receiving financial benefits, some after beginning their period of commitment payback. Our experience with program participants over this twenty-year period has been that those who withdraw early discover that child welfare was not what they had anticipated and not what they want to pursue as a professional career. In general, baccalaureate-level students are just beginning their professional career path and it is not uncommon for undergraduates to underestimate the rigor and reality of child welfare work. We have learned that this important discovery is to be anticipated in a certain number of instances among CWEB students and is best identified before great time, training, and costs have been expended.

\(^{20}\) 45 CFR, Ch. II, §235.63 (b) (5)
\(^{21}\) 45 CFR, Ch. II, §235.63 (b) (1)
In 26 years of program operation, it is notable that only 5.5% of the students admitted to the CWEL program have resigned or been terminated from the program. These departures are for various reasons, represent widely distributed counties, and include most schools. These situations, together with the actions being taken are summarized in Table 1. The employment (retention) of all students exiting the program will continue to be monitored as required in Section II, G, 13 of the Program Description and Implementation, and by PL 103-432 which was enacted by the United State Congress during the first CWEL program year and which applies to graduates funded after October 1, 1995.

Retention has two aspects in the CWEB and CWEL program. The first is the retention of currently enrolled students. Among both programs combined, the student loss rate is 4.2%. This is most reasonable considering the large number of academic, work, and personal factors that can affect the decision to withdraw from an academic program. The second aspect is the retention of graduates after they have completed their work commitment. Over the past 20 years of the CWEB program (through the summer of 2021), 1,220 CWEB students accepted employment after graduation. Within the CWEL program, only 20 individuals out of a total of 1,541 graduates have not completed their employment commitment after graduation. We believe that these consistently high retention rates across time is a strong indication of the success of our professional education programs. Child welfare work is difficult, emotionally draining, complex, and not for the faint-hearted. It does not pay well, the hours are long and often unpredictable, and clients are generally not enthused to have a child welfare worker in their lives. Along with these realities come the rewards of helping a child achieve permanency, re-engaging family members who may have drifted apart for several reasons, contributing to a young person’s voice being heard, and coordinating concrete resources for a family living on the margins of poverty.
Table 1. Student and Graduate Departures from Programs and Recoupment

*NOTE: Recoupment numbers reported in last year’s Table 1 were accurate only for recoupments up to 8/15/2019. This year’s report accurately reflects recoupments to 8/15/2021.

</table>
Among the CWEB graduates (2018-2019) who have recently satisfied their legal work commitment 42% remain in the agencies. Overall, 46% have exceeded their commitment by over two years. Increased familiarity with the program, more focused selection criteria and stronger case management has contributed to improved outcomes. The number of CWEL graduates who have discontinued child welfare work for all reasons over the life of the program averages 8.2% per year. This figure includes death, retirement, total and permanent disability, transfer of spouse/partner employment out of state, and other routine changes of employment.

Despite the loss of some participants, both the CWEB and CWEL programs have a strong record of retention. Nevertheless, there are real reasons behind each of the post-commitment departures. We describe these in our previous annual reports, have presented them at state-wide committee meetings focusing on recruitment and retention (PCYA, AOPC, Child Welfare Council), and at national-level professional meetings (CSWE, NCWWI). We include additional information later in this report. Fortunately, many of the root causes of turnover can be remedied, though some are more difficult to address than others. We are committed to working with county agencies to focus on organizational-level solutions that can assist in selection criteria, workforce development, worker retention, and the enhanced capacity of child welfare systems.

**Deliverables**

The entry of 1,300 CWEB students into the child welfare workforce and the return of 1,541 CWEL graduates to 66 county agencies have been instrumental in highlighting the two programs on a county and statewide level. The CWEL and CWEB programs are embedded in the culture of public child welfare in Pennsylvania and relied on to educate and inform the development of both early career professionals and those who demonstrate emerging leadership skills. There is a rich legacy of CWEB and CWEL graduates leading county child welfare agencies in Pennsylvania. This year, four additional counties promoted CWEB and CWEL graduates into their top Administrator, Director, and Manager roles. Currently, 45% of all county child welfare agencies have a CWEB or CWEL graduate in a top leadership position. As leaders, CWEB and CWEL
graduates see the value in these programs and recognize them as resources needed to build and strengthen their agency workforce. This year, the number of applicants and admissions to the CWEL program rose significantly, demonstrating the commitment of county agency leaders to utilizing the program for the professional development of their staff.

Faculty members from our partner schools across the state of Pennsylvania are active in recruitment efforts. Although in-person recruitment paused due to safety measures required by the COVID-19 pandemic, the CWEB Team, along with faculty members from each of our partner schools, met virtually with close to 250 students over the academic year. Recruitment of additional students also took place through the efforts of partner school faculty talking with students, sharing written recruitment materials, and distributing links to recorded recruitment sessions. Throughout the year, social work students and county public child welfare employees contact CWEB and CWEL faculty and staff to ask questions about the programs and to request additional information and guidance. Nearly all counties in the state of Pennsylvania participate in the two educational programs, evidencing that recruitment efforts are working. Continued efforts are essential to ensure that the opportunity for child welfare-focused education is widely known across Pennsylvania’s counties and school programs. New professionals are continuously joining the staff at public child welfare agencies, and new students enroll in our partner schools each year. A series of detailed webpages ([https://www.socialwork.pitt.edu/researchtraining/child-welfare-education-and-research-programs](https://www.socialwork.pitt.edu/researchtraining/child-welfare-education-and-research-programs)), a program email address (cwerp@pitt.edu) and a toll-free phone line [1 (866) ASK-CWEL/1 (866) 275-2935] are available for those interested in learning more about the CWEB and CWEL programs.

Online information is robust, routinely updated, and publicly available on the School of Social Work website. Additionally, both programs are accessible through the Child Welfare Resource Center (CWRC) website. The CWEB and CWEL webpages include a Student Handbook for each program as well as “Frequently Asked Questions” to clarify program
information and address common concerns. A realistic caseworker job preview developed by the Office of Children, Youth and Families is located on the CWEB webpage.

The CWEB/CWEL program continuum also has a Facebook page. Student accomplishments are highlighted here to display the wonderful work of our students and graduates. This outreach builds community and illustrates the personal connection both programs develop with participants. Program information is readily available to county agencies and schools through electronic and personal communication. Meetings occur throughout the year with county leadership teams to share current information about the CWEB and CWEL programs and to encourage participation and support. CWEL program information sessions are held with interested county staff to review application requirements, share program information, and encourage participation.

Bi-monthly CWEB student meetings occurred throughout the year on the first Thursday of the following months: August, October, December, February, April, and June. The meetings, conducted remotely via Zoom, included the CWEB faculty and staff, along with Child Welfare Resource Center Resource Specialists. These meetings informed and supported CWEB students during their academic year in the program. Students learned about CWEB processes, shared experiences related to the training series for new caseworkers, Foundations of Pennsylvania Child Welfare Practice, discussed the hiring process for county child welfare agencies, and supported each other as they built a statewide CWEB community. Approximately 20 CWEB students attended each meeting and student participants were key to the development of agenda items for upcoming meetings.

Meetings were also held with CWEL students during each academic term. Groups of about 30 students across school programs and county agencies came together in a learning community to dialogue with CWEL faculty and staff. Students shared successes and challenges and contributed program improvement suggestions during the meetings.
The University delivered the following products and made these efforts during 2020-2021 in accordance with the approved Project Description and Implementation plan:

- Previous annual reports were posted on the CWERP website and made available to all county administrators, DHS officials, CWEB and CWEL academic partners, and other interested state and federal officials.
- CWEB and CWEL program and application materials were posted on the CWERP website for all counties, participating schools, and interested parties.
- Dr. Cahalane received a third year of funding for the Child Welfare Workforce Excellence Fellowship as part of the Workforce Excellence partnership with Allegheny County Children, Youth, and Families in the amount of $150,000. This funding from the U.S. Children’s Bureau and the National Child Welfare Workforce Institute will continue annually for five years.
- Dr. Perry received funding in the amount of $25,000 from the University of Pittsburgh Center for Interventions to Enhance Community Health (CiTECH) for a 12-month pilot study designed to facilitate stronger collaboration between a local child welfare office and a community provider agency offering Intensive Family Coaching. Intensive Family Coaching is a modified version of Parent-Child Interaction Therapy that is designed specifically for child welfare-involved family and offered in the home.
- Dr. Winter continued to provide consultation to the Child Welfare Resource Center on Team Based Learning and assisted in adapting the trainings for remote delivery during the COVID-19 pandemic. Dr. Winter also provided consultation to the new CWEL Academic Coordinator.

The CWERP faculty and staff contributed to a variety of scholarly publications in 2020-2021 and conducted presentations, training, and consultations to share their knowledge with others. Presentations were virtual due to the COVID-19 pandemic. Their works include the following:
Presentations:

- Cahalane, H. (August 14, 2020) Update on CWEB/CWEL programs provided to ACF as part of Pennsylvania's Practice Improvement Plan.

CWERP faculty received the following recognition:

- Dr. Perry became the Director of Research and Evaluation for the Child Welfare Education and Research Programs and was promoted to Associate Research Professor.

CWERP faculty served as first author and co-author on the following publications:

- **First Author Publications:**

- **Co-Author Publication:**
Other Publications:

  
  [https://doi.org/10.26079/a516-fb24](https://doi.org/10.26079/a516-fb24)

CWERP faculty served as peer reviewers for the following:

- Perry, M., *Children and Youth Services Review* (March 2021)
- Perry, M., NSDTA National Education Conference (April 2021)

CWERP faculty and staff served on boards, committees, provided consultation, and mentorship to share their expertise and recommendations. These activities included the following:

- Cahalane, H. (February 17, 2021) Consultation with University of Southern Maine and the Cutler Institute regarding CWEB/CWEL programs.
- Winter, E.A. (2020) Steering Committee, Team-Based Learning Collaborative Member at Large for Higher Education.

- Program evaluation instruments were distributed to all participating counties, schools, current students, and a sample of graduates from both CWEB and CWEL as part of the annual program evaluation, the results of which are described later in this report.

- Faculty/staff visits were held with participating school programs virtually beginning in the Fall of 2020 and continuing through the Spring of 2021. These visits are summarized in Tables 2-5 below and included meetings with current students, academic faculty, and academic program administrators. Focus groups regarding professional development for public child welfare workers were held with the CWEB and CWEL students, the details of which are described below.

- In addition to the specific activities noted above, hundreds of telephone and e-mail inquiries were handled from potential students, agency administrators, county commissioners, other states, and other colleges and universities.

**Virtual Campus Meetings**

Due to the COVID-19 pandemic, all student meetings were held remotely. Students openly shared their experiences both in the classroom and in the child welfare agencies during sessions with CWEB and CWEL faculty. Questions related to many aspects of child welfare education and practice, as well as specific issues related to the CWEB and CWEL programs, were discussed by the students and faculty. Constructive dialogue about topics such as course availability, policy issues, academic concerns, and administrative procedures occurred. Students spoke candidly about the benefits and challenges of being members of the PA child welfare workforce throughout the past year and to their participation in largely virtual school and agency environments.

**Focus Groups**

During the fall semester CWEL student meetings, participants were asked multiple questions to gain a better understanding of what they believed would improve their experiences in the CWEL program. The questions asked about transitions between work and school, electives
that would elevate their skills as social workers, and classroom/field experiences that are informing their work as child welfare professionals.

Many students are continuing to experience classes online for the second academic year due to the COVID-19 pandemic. Other students have returned to entirely in-person classes. There is a wide range of preferences from students who prefer all classes online to students who only want to attend in-person to students who appreciate a combination of the two. Students commented that going back to in-person classes has been an adjustment. They are now travelling to campus and making caregiving arrangements for other family members when they did not have to do this last year. This has stretched students’ capacity and has been particularly challenging for part-time students. Part-time students struggle balancing work, school, field, and family responsibilities. Increased rates of caseworker turnover have made this even more difficult. Students, overall, appreciate having some opportunities to participate in classes online in order to have more time for other responsibilities. Several students expressed appreciation for permission to complete work-based field placement. They are learning a skill in child welfare that is outside their specific job responsibilities while remaining in the same familiar physical location and cutting out travel time. Part-time students expressed that it would be helpful to have increased flexibility with work hours and to have back-up co-workers available to step in and cover work on their cases if they have class or field scheduled.

Students responded to the question about electives with many valuable suggestions for courses that could enhance their knowledge and skills for working with children, youth, and families. Responses included courses on:

- Administration and Leadership
- Child Welfare Law
- Grief and Loss
- Human Sexuality
- Human Trafficking
- Incarcerated Individuals and Community Reintegration
- Meditation and Mindfulness
- Mental Health
- Public/Professional Speaking
- Social Justice
- Substance Use Disorder and Pregnancy
- Trauma/Secondary Traumatic Stress

Students shared experiences they had in class or in their field placements that were particularly impactful in their learning. Responses showed that students were benefitting from learning about trauma-informed practice, social justice, and child and family policy. Students shared their successes in the field working directly with parents, including using Motivational Interviewing skills, strengths-based practices, and knowledge of family systems theories to help parents on their caseloads. Students completing work-based field placements commented that the experience has opened their eyes and created a new understanding about what other units or departments within their agencies do for children, youth, and families.

During the December bi-monthly Zoom call, CWEB students were asked a series of focus group questions based on feedback from the past academic year’s program evaluation surveys. Students were asked what types of information should be provided to their field supervisors to provide a more in-depth and consistent field experience. Students spoke about the need to advocate for themselves to achieve a well-rounded field experience. Some students spoke about not really knowing the particulars of a child welfare agency until after starting the Foundations training. Other students discussed the lack of investment by their supervisors or that their supervisors were new to the role and were unaware of what a CWEB student should be learning. A couple of students didn’t have any issues with their field supervisors due to having expectations explained to them before the internship started and learning the basic tasks of a child welfare caseworker.
Some schools have clear standards in place on what they expect their students to learn while in the internship. As one student described, “As long as supervisors understand that interns should be functional caseworkers by the end, they should be fine.”

Another issue discussed by the CWEB students was the promotion of the CWEB program. A poll conducted during the Zoom meetings indicated that most students learned about CWEB from their school faculty/staff. One student recommended sharing the CWEB information with local community colleges, as only a select number of community college faculty are aware of the CWEB program and the system is an avenue for social work majors at 4-year institutions. The students also discussed the virtual recruitment sessions that occurred during COVID. Most students enjoyed the virtual format of the recruitment sessions and found them open, less pressure, and convenient.

An important aspect of the bi-monthly Zoom meetings is to make the CWEB program participants a more cohesive cohort. A poll was also created based on suggestions from last year’s surveys. The majority suggested modifying the content of bi-monthly Zoom calls, with some students suggesting more support at the beginning of the program especially regarding the structures and functions of a child welfare agency. Another student recommended learning how to balance the Foundations work with his or her coursework. Finally, a suggestion was made to have regionally based meetings with CWEB students throughout the year so that students are aware of others participating in the program and can gain an additional level of support.

The final question was regarding additional electives that would be helpful in preparing the CWEB students for child welfare casework. Suggestions included: a class dealing with trauma; a class reviewing the family court system in Pennsylvania; and a class that can prepare CWEB students to complete the myriad of paperwork involved in child welfare casework. One student said “making an interpersonal communication class mandatory. If you can’t communicate with someone you’re not going to get anywhere.” These suggestions will be added to the monthly CQI meeting to continue to improve our child welfare programs.
The Changing Landscape of Pennsylvania Public Child Welfare

Previous annual reports have referenced the major shift in Pennsylvania’s child welfare system operations resulting from public exposure and subsequent legal proceedings that emanated from a decades-long child abuse travesty. We refer readers to the 2012 special investigation report cited here for information regarding this highly publicized case and to the policy and statutory recommendations of the Task Force on Child Protection formed by the Pennsylvania General Assembly.

The resulting escalation of work demands stemming from greater public recognition of suspected child abuse or neglect, an increased number of substance-exposed infants, more families dealing with severe addiction issues, and new statutory requirements has continued to add to the stress of an already taxed child welfare system in Pennsylvania. The pandemic has resulted in new demands, new stressors, and an increased responsibility for supporting families and children in unprecedented times. A 28% decrease in suspected child abuse reports from 2019 to 2020 has raised deep concern about child and family well-being in the absence of mandated reporters who come in contact with children in education, medical, and community settings. Much of the child welfare workforce across the state operated remotely during this review period, providing on-site staffing in shifts, conducting essential investigations and safety assessments, assuring child-family visitation, and following public health protocols to the best of their ability. Turnover among the child welfare workforce continues to be painfully experienced in both public and private agencies. At the same time, new opportunities to employ more efficient and effective modes of practice, including the use of virtual technology, data-driven decision making, predictive analytics, and evidence-based interventions, are available. All these factors continue to influence the landscape.

---

22 Freeh, Sporkin & Sullivan, LLP (July 12, 2012). “Report of the Special Investigative Counsel Regarding the Actions of the Pennsylvania State University Related to the Child Sexual Abuse Committed by Gerald A. Sandusky”.

of Pennsylvania public child welfare. The passage of the Family First Prevention Services Act in February of 2018 and the implementation of the state-level FFPSA Prevention Plan brings additional opportunities and expectations to the child welfare workforce.

**Evaluation**

**Introduction**

The CWEB and CWEL programs have several critical stakeholder groups: schools participating in the educational programs, current students and those who have recently graduated, and the county agencies that employ them or provide field placements. Because these are such important constituents, they are surveyed annually; their responses provide valuable information about the utility and quality of the curricula and field experiences, as well as which areas offer opportunities for improvement. These constituents also share their perspectives about the value that CWEB and CWEL students bring to their schools and child welfare organizations. In addition, we ask students who have graduated and been working for at least one year about the organizational culture of their work environment. This information helps us to better understand which aspects of work climate are associated with positive outcomes, such as commitment to the field, job satisfaction, and personal achievement. All this information is shared with CWEB and CWEL stakeholders, including agency administrators, school faculty, and CWEB/CWEL faculty and staff to inform and help improve the quality of services, curricula, and working environments.

The CWERP program is pleased with the outcomes of the work performed by the CWEB CQI committee to translate the concerns of the CWEB students into programmatic changes. The bimonthly webinar participation by current CWEB students and CWEB graduates have continued to be robust, with participants engaging in future sessions. The CWEB team also started hosting webinars for newly accepted CWEB students to answer any questions and ensure they understood the process and the program requirements. Because of this effort, CWEB students praised the

---

support, communication, and fellowship provided by these meetings. The CWEB CQI group instituted an additional level of support for graduates entering the field of child welfare. The CWERP program contracted with a former child welfare county administrator to speak with the CWEB graduates 90 days, 6 months, and 9 months after they begin their child welfare career. It is our hope that this additional level of support will aide in the retention of these young child welfare workers.

What follows are the findings from the 2020-2021 evaluation. The first two sections summarize the results from current students and recent graduates of the CWEB and CWEL programs, respectively. The third section summarizes what long-term program graduates say about the climate of the child welfare agencies in which they work. The fourth section highlights the findings from school faculty and agency administrators who have employees currently participating in, or who have graduated from, the CWEB or CWEL programs. The final section reviews the core competencies exhibited by CWEB and CWEL program participants.

All surveys are web-enabled. Throughout the year, emails and instructions are sent to current students, recent graduates, long-term graduates, and CWEB/CWEL schools and counties with information on how to access their surveys, which are located on a secure server. A standard follow-up protocol is in place to try to obtain a minimum 50% response rate for each group of respondents. Response rates are reported below. Datasets were cleaned prior to analysis. Usable surveys had to have at least 50% of the questions answered. Surveys that did not meet this threshold were dropped from the analyses.

During this 2020-2021 evaluation cycle, we continued using questions about core competencies that research has demonstrated as important for the child welfare workforce\textsuperscript{25}. These questions were included in the current student, recent graduate, and long-term graduate

surveys for completion by those who supervise or mentor CWEB students. We asked respondents to rate the degree to which the competencies are exhibited by CWEB students whom they supervise or mentor in their agencies.

**Current CWEB and CWEL Students**

**Survey procedures and methods**

An email with a link to the survey was sent to all CWEB and CWEL students currently enrolled in the program. Students were sent notices in January 2021 and were given until March 2021 to complete the survey. One hundred and six students responded to the survey (see Table 6 below for response rates). The survey asked the students to rate (1) their experiences with the CWEB/CWEL program and processes (e.g., website, communication, student contract, faculty, and staff helpfulness); (2) their relationship with the faculty and the university that they attend, and the quality of the courses they take; (3) the agency/field interface; and (4) their beliefs about the value of their education to child welfare practice and their commitment to the field. The statements are positively worded, and the rating scale is from 1 (Strongly Disagree) to 5 (Strongly Agree), with higher ratings indicating a greater degree of satisfaction.

Most of the questions were common to both programs, such as “I received good supervision in my field placement or internship placement.” Some items were unique to the program and to the student’s status. For example, CWEB students were asked if their field site agency was familiar...
with the requirements of the CWEB program. The full-time CWEL students were asked about their return to the agency in the summer, and the part-time students were asked questions about the ease of arranging time for field and classes. Part-time CWEL students were also asked to rate the CWEB students they supervise or mentor (if applicable) on a series of core competencies. The results of these items can be found in the Core Competency section below. If students were currently in their field placement, they were asked about the focus of their responsibilities and their agency type.

Finally, because we are interested in the career paths of child welfare professionals, the current CWEL students were asked if they had been a CWEB student, and if they were still employed by the agency in which they had completed their CWEB work commitment. Three open-ended questions asked about positive aspects of the program, areas for improvement, and qualities that may help prospective CWEB/CWEL students succeed in the program. A final question asked if the students have received any awards or recognitions for their academic or field work during this survey period.

Pennsylvania
Is there a career pathway?

One of our goals is to determine the extent to which a professional education and career pathway is in place for the child welfare workforce, and how recruitment at the undergraduate level can help foster a long-term career in public child welfare. The ideal education and career pathway for a child welfare professional is shown in Figure 9. Participation in the CWEB and CWEL programs ensures a well-educated and explicitly trained workforce, which will elevate the quality of casework practice in the Commonwealth. In fact, thirteen percent (13%) of the current CWEL respondents said that they received their degrees through the CWEB program. The majority of these CWEL students (91%) are still working at the agency in which they did their post-CWEB work commitment. We have observed this CWEB to CWEL progression pattern for many years. In fact, 45% (30/67) of Pennsylvania’s county child welfare agencies have a CWEL graduate in a leadership position within the agency. This information showcases that the proposed career pathway displayed in Figure 9 is a viable way to support agency retention of workers.

The value that current students find in the CWEB and CWEL programs is illustrated in the following sample of open-ended survey responses.

"Being able to spend an entire academic year at a field placement that directly correlates to the job you will have after graduating is a wonderful experience." (CWEB Student)

"CWEB helps properly educate social workers to be efficient and helpful to their clients. The program allows for students to get the most out of their internship and helps prepare them for work after graduation." (CWEB Student)

"Participants get direct service experience to remain in-tune with the needs of the communities we serve; while simultaneously learning the practical research techniques and knowledge necessary to advocate and intervene in the most culturally sensitive and anti-oppressive way." (CWEL Student)

"The CWEL program allows me to expand my knowledge base of child protection services by providing me with cutting edge skills and tools. With these tools I can better help families make informed decisions on how to best handle the needs of their children." (CWEL Student)
Moreover, agency directors have told us in prior evaluations how much their organizations benefit when these well-trained and seasoned caseworkers remain in their agencies. However, it is important to stress that both the agency and the worker must carefully consider whether the worker should enroll in the CWEL program. It is not suitable for everyone, due to the necessary time commitments and the challenges with work-life balance. For instance, one agency administrator cited issues with their agency’s need for part-time CWEL participation:
“I support these programs however it is difficult to allow one to participate full-time when it results in shortage of staff. They are able to participate part-time if they desire.”

The recommendation to have the ability to complete the CWEL program online has been suggested in previous years, due to lack of easy access to MSW programs in parts of the state. However, this option has additional complications, such as scheduling time to complete online coursework and adjusting hours for synchronous learning activities. In response to this need, however, CWERP is now offering a completely online MSW program through partnerships with Edinboro, Temple, and Widener Universities. This academic year a total of 10 CWEL students participated in the fully online MSW programs. While a small number, we will learn from this experience and carefully consider whether to expand this option to full-time graduate study.

To address online learning, the Classroom Community Scale was added to the Current Student survey. The Classroom Community Scale is a 20-item inventory with a total score and two subscales (Connectedness and Learning). The scale is rated on a 5-point Likert scale with 10 items increasing positively (0=Strongly Disagree and 4= Strongly Agree) and the remaining items increasing negatively (0=Strongly Agree and 4=Strongly Disagree). Items were recoded so that ratings were in the same direction, and a score was derived by calculating the mean for the total score and subscales. A little over half (60%) of the online MSW participants completed the survey. Overall, the individuals rated the total score ($M=2.67, SD=.67$), Connectedness subscale ($M=2.50, SD=.85$), and Learning subscale ($M=2.94, SD=.46$) more neutrally, suggesting an adequate online learning experience. There were some variations in scoring, especially around feeling connected to peers and feeling that their education needs were being met.

---

When looking at the findings from the original online MSW pilot participants, the means decreased only slightly. Since the CWEL students are surveyed multiple times throughout their academic career, it will be interesting to see if these ratings change with increased comfort and familiarity with the online learning platform. With increased participation in the online MSW programs, there will be more survey responses in the coming academic years. We also acknowledge that the 2020-2021 Academic Year was primarily one of remote learning during the pandemic. The influence of childcare demands, changes in school routines, health and safety concerns, and differential access to community resources became factors influencing satisfaction in most aspects of life. Within educational settings, “zoom fatigue” has likely influenced perceptions of the online learning environment.

Students who work full-time while attending school report that part-time study is often challenging, in part due to high caseloads and difficulty in finding a school, life, and work balance. With over half of CWEL students (53%) in this category, it is important for them to have candid discussions with their director and supervisor about expectations and workload while participating in the CWEL program. Part-time CWEL students wished for more flexibility from their county agencies while participating in the CWEL program: “I think there should be more flexibility for part time students. Part time students are working, doing school, and their internship while full time students don't have to juggle that. We are being required to meet 40 hours at work each week while working around our internship and classes”. Other part-time CWEL students felt the university they attended did not understand their workload: “The CWEL program is NOT conducive to part-time students and the University has made little to no adjustments to factor the workload into the amount of schoolwork. In addition, there is no regard for "mature" students.”

To increase the flexibility and support from county child welfare agencies, one part-time CWEL
student recommended, “There needs to be more organization and a set limit on caseloads as our county's give us a full caseload and then will not work with our schedules.”

With the above in mind, additional discussions may need to take place with the participating CWEL schools and county agencies, so that there is an understanding of the time requirements for part-time CWEL students, and reconsider options based on CWEL participants’ roles in their agencies. CWEL schools could present cases on how a full-time job and part-time education affect all aspects of a student’s life: their work; their clients; their educational capabilities; and performance in their field placements.

How do students perceive their program?

When asked about the most important aspects of their CWEB or CWEL program, students responded:

“The aspects of the CWEB program that are positive is that the program gives you an insight of what it is like to work in child welfare. I thought that finding an internship would be fairly difficult, but with being accepted into the CWEB Program many doors opened for me and I am thankful for that.” (CWEB Student)

“I believe it gives you a head start into the field. It allows you to get trained, build experience, and obtain employment to start your career all while being able to finish your degree!” (CWEB Student)

“I think that my approach to working with clients has changed significantly since I have developed a social work approach.” (CWEL Student)

“It provides a wonderful opportunity to learn new skills, to educate yourself further and be able to go back into the social work field and make a larger impact than you would have if you hadn’t had the experience.” (CWEL Student)

CWEB and CWEL students highly value their professional education. Using a scale from 1 to 10, with 1 having the lowest value and 10 the most value, respondents were asked, “What is the value of the CWEB or CWEL program to the public child welfare system?” The average score for the CWEB students was 9.25 (SD=1.24), and the average score for the CWEL students was 9.37 (SD=.93). Responses to this question, as well as each survey item (rated on a 1-5 scale from
Strongly Disagree to Strongly Agree) can be found in Table 1, Appendix J. Table 1 displays the responses of the CWEB students, as well as both the full-time and part-time CWEL students. All three subgroups report being satisfied with the degree program, the agency and field interfaces, some of the degree processes, and aspects of their field/internship experiences. Their aggregate responses are graphically displayed below (Figure 10).

**Figure 10. Current Student Satisfaction with CWEB/CWEL Programs**

![Figure 10](image)

Figure 11 below demonstrates the changes in satisfaction ratings over the past six academic years. While there continue to be small changes in satisfaction ratings in the last three years, all ratings are still clustered around the Somewhat Agree/Strongly Agree range.

In general, CWEB and CWEL students’ satisfaction ratings are similar to those reported last year with some slight variation. CWEB students’ satisfaction scores were higher than last year, but CWEL students’ satisfaction scores were lower than last year. None of these differences were statistically significant. CWEB students’ rating for the CWERP program was the highest this year, with the 2016 year coming in a close second. A concerted effort to further engage the CWEB
In the open-ended comments, CWEB students discussed the support they are receiving from the program administrators. This shift in satisfaction is exemplified by these quotes:

“Having the staff at Pitt be very helpful and super responsive to any issues or questions that I have had has been great, everyone has just been super helpful though the entire program so far.”

“I feel a sense of community with other CWEB students.”

These experiences will help to provide CWEB students with a strong foundation and resources to build their child welfare careers.

Current CWEL students gave several suggestions as to how the program could be improved. Many expressed the desire to have their county child welfare agencies increase their
flexibility concerning caseloads, internship hours, and class scheduling. The majority of CWEL students felt that a full-time educational option is the best way to complete the program. Some CWEL students were concerned about the lack of elective options and wanted the opportunity to take more online courses. CWEL students wanted the opportunity to include macro-focused courses in their education to increase their knowledge of management, supervision, and policy making.

As in previous years, CWEL students wanted to have more voice and options with their internship sites. CWEL students recommended the CWEL program administrators collaborate with the partnering schools regarding course selection and with county administrators regarding returning to work and the advantages of full-time participation. Meetings with school administrators continue to make connections and promote collaboration. In fact, in last year’s program evaluation, CWEL student asked about the possibility of obtaining an additional certificate or pursuing a specialization. Specialized certificates in trauma and a child welfare specialization are permitted if no additional cost (tuition/fees as well as time in the academic program) is incurred by the CWEL program given that its specific purpose

PROFILES IN EXCELLENCE I:

A Widener University CWEL completed her first-year field placement at the Interstate Compact Unit. The Interstate Compact Unit enables children involved in the child welfare system to either leave or enter states to live with kin or friends. Interstate Compacts often take 6 months or longer because everything needs to be safe for this to happen. Even though this student was not able to witness the outcomes of most of her cases, she received a happy surprise: an email from a family with whom she worked. The family’s email was “thanking me and informing me the children had arrived from the state of Virginia and were currently residing here in Pennsylvania thanks to my help, and the Interstate Compact staff in Harrisburg.”

This student said of her work at the Interstate Compact Unit “it was a lot of paperwork, and it was a lot to work with another county, and state regarding getting permanency for these children. I am happy they are now with a relative in the state of PA instead of in foster care...”
is advanced child welfare education. The CWERP program has also presented the CWEB and CWEL program to county administrators during their quarterly meeting and plan to continue this at least once a year.

To determine if there were statistically significant differences between this year’s CWEB and CWEL students, between last academic year and this academic year, or between full- and part-time CWEL students, we conducted t-tests. The p-value indicates statistical significance, with anything less than .05 considered statistically significant. In this academic year, there were more areas that differed significantly between CWEL and CWEB students. CWEB students were more likely to feel that their degree will help them contribute to the field of child welfare ($t = 2.37$, $p < .05$). CWEB students also were more likely to acknowledge that their advisors were familiar with their program ($t = 4.05$, $p < .001$); their child welfare course was relevant ($t = 3.46$, $p < .01$); and that their faculty make the child welfare course relevant to practice ($t = 3.90$, $p < .001$). In addition, CWEB students gauged the CWERP faculty at Pitt more responsive ($t = 0.69$, $p < .05$).

Although not statistically significant, CWEB students’ ratings on the individual satisfaction ratings for this academic year increased. CWEL students’ ratings decreased slightly this year. None of these differences were statistically significant.

There were also significant differences between full-time and part-time CWEL students. In general, full-time CWEL students rated survey items more positively than their part-time counterparts. Part-time CWEL students rated the program giving them an educational opportunity they may have not otherwise had ($t = 2.06$, $p < .05$), their field as a valuable learning experience ($t = 2.94$, $p < .01$), and their understanding of the contract ($t = 2.34$, $p < .05$) lower than full-time CWEL students. In addition, part-time CWEL students rated the CWERP faculty’s responsiveness ($t = 1.41$, $p = .05$) and help from the CWERP faculty ($t = 2.45$, $p < .05$) and staff ($t = 2.15$, $p < .05$) lower.
than full-time CWEL students. We have observed this difference between full- and part-time students over the years and are confident that it reflects the experience of school as a welcome, yet also difficult, endeavor while managing the demands of full-time employment.

Students’ responses to the open-ended questions provide us with useful information about the agency, school, and CWEB/CWEL programmatic factors that assist students during their pursuit of a BSW/BASW or an MSW/MSS. Along with the financial support offered by the programs, notable themes surrounding the positive attributes of the program emerged. Many students expressed appreciation of the experiences and opportunities they gained from field placements and how those experiences prepared them for employment. Additionally, CWEB students spoke about how the program removed the stress of finding a job after graduation. Consider these comments from CWEB students:

“This program has great value to the public child welfare system itself because it incentivizes students to go into child welfare. I have had direct practice experience with clients, and a mentor assigned to me.”

“This is like getting our foot in the door and it guarantees a job for graduating students.”

CWEL students have historically expressed the financial support as a positive aspect of the program. However, this year, CWEL students also voiced their appreciation in being able to gain applicable social work knowledge and enhanced professional skills that can be utilized in their work in the field:

“To gain a better understanding of social work on all levels, micro, mezzo and macro in order to provide higher quality service to the clients we serve.”

“Completing field placements outside of the agency to get experience and increased knowledge of community resources that will be helpful when returning to the job. This
helps build relationships with other community agencies and increase understanding of the role and abilities of OCYS.”

“The program allows us to view other fields of study and take a broader approach to problems and concerns within the agency.”

“This program has given me more confidence in my ability to assess individual cases appropriately. It has also helped me to be aware of any biases and handle myself in an improved professional manner when working with families....”

Some CWEL students reported that the programmatic experience helped them to engage with other professionals in the field, thereby enhancing their knowledge of other services and the other professionals’ knowledge of child welfare. Exposure to different departments in their child welfare agencies through field placements enhanced CWEL students’ knowledge and appreciation of the mission of their agencies. Both CWEB and CWEL students expressed appreciation for the support they received in the program from both the CWEB/CWEL faculty and staff, as well as from their county child welfare agencies.
Recent CWEB and CWEL Graduates

Survey procedures and methods

An email with a link to the survey was sent to graduating cohorts of CWEB and CWEL students in winter 2020 and the spring and summer of 2021 \( (n=95) \). The response rate for CWEB and CWEL graduates can be found in Table 6. The total number of usable surveys was 52. Nine respondents graduated in winter 2020, 39 in spring 2021, and 4 in summer 2021. Forty-two percent \( (n=22) \) were CWEB graduates and 58% \( (n=30) \) were CWEL graduates. Additionally, 21% \( (n=6) \) of the CWEL graduates identified themselves as former graduates of the CWEB program, and, of those, 100% \( (n=6) \) were still working at their CWEB commitment agency at the time of graduation from the CWEL program.

Description of the survey respondents

White, 65%
How do recent graduates perceive their program?

The survey includes questions about preparation, perceived skill levels, opportunities to advance within the agency, commitment to the agency, and commitment to the field of child welfare. The statements are positively worded, and the rating scale is from 1 (Strongly Disagree) to 5 (Strongly Agree), with higher scores indicating a greater degree of agreement. The mean responses to each of the questions by CWEB and CWEL groups can be found in Table 2 in Appendix J. Statistically significant differences were observed between the CWEB and CWEL students. CWEB graduates in general felt more prepared for working in the field of child welfare ($t=2.36, p=.022$), had a better understanding of families’ complex problems ($t=2.45, p=.017$), and felt they had more opportunity and authority to make professional decisions ($t=2.04, p=.046$) than their CWEL counterparts. In addition, when compared to CWEL graduates, CWEB recent graduates would recommend public child welfare to others ($t=2.23, p=.030$), would recommend their agencies to others ($t=2.27, p=.027$), felt their agency utilized their educational expertise ($t=2.57, p=.013$) and that there were more opportunities for advancement ($t=2.38, p=.021$).
One of the open-ended questions focuses on commitment to the field. A review of these responses suggests that any lack of commitment to the field among CWEL participants could be a result of several factors, including the inability to use the skills they learned in the master’s program, low salary, poor opportunities for advancement, the stresses of not being able to spend adequate time with families on their caseloads, and/or an unsupportive environment. CWEL graduates also stressed the importance of having their voices be truly heard in decision-making processes and their expertise being overtly recognized by partnering agencies. Although the desire to help children and families remains, graduates find that the challenges can overshadow their work with clients.

The recent graduate survey is comprised of four subscales: (1) career advancement; (2) educational preparation of CWEB and CWEL graduates; (3) commitment to child welfare; and (4) agency utilization of the student’s education. Alpha coefficients for these subscales ranged from .74 to .90, confirming the integrity of the survey. Average subscale ratings for recent CWEB and CWEL graduates are shown in Figure 14.
CWEL graduate ratings are lower than CWEB graduates for all subscales but are still trending to the positive side of the scale. The two most striking differences between CWEB and CWEL graduates are on the “career advancement” and “agency utilization of student’s education” subscales. The mean scores on both subscales were rated higher by CWEB graduates compared to CWEL graduates and were statistically different at the .05 level. Combined with results from the t-test discussed above and the reviews of the open-ended comments, these ratings suggest that more attention should be focused on the agency level to improve the career outlook for CWEL graduates, as this is a key contributor to retention. Discussion should occur early in the process, ideally when the worker is applying to CWEL. Prospectively thinking about how to utilize new knowledge and skills may begin to widen thinking beyond “promotion” and may also open crucial discussions between workers and supervisors/managers/administrators.

While some agencies may not have the capability to promote CWEL graduates to supervisory positions, selecting CWEL graduates to serve on committees or oversee special projects enable the CWEL graduates to use the skills they obtained in their MSW programs, thus...
giving them a greater sense of influence, satisfaction, and pride in their work. In addition, providing CWEL graduates an opportunity to have input into how new state mandates will be implemented in the agencies will not only give the administration valuable information on how changes in protocol affect front-line staff, but will provide the CWEL graduates with a sense of empowerment and recognition that their opinion is valued and that they have a voice in the agency culture. CWEL graduates should also be involved in agency-sponsored change initiatives. Their knowledge of the agency culture needs, along with their educational background, place them in a perfect position to recommend changes that can positively impact the agency. As noted by one agency administrator, “With their increased knowledge of evidence-based practices (EBPs) and newly developed clinical skills, CWEL graduates are also well-poised to support the utilization of EBPs among children and families served by the agency. Perhaps they could serve as a liaison with EBP providers or help their peers better understand EBPs available to families in their county. This skill set is particularly important with the recent implementation of the Family First Services Prevention Act.”

Graduates of both CWEB and CWEL feel that their respective programs have prepared them for working in the child welfare system. Ratings were slightly higher for CWEB graduates than for CWEL graduates on this subscale, which is an interesting contrast to previous years. Perhaps this shift is due to the more hands-on approach to supporting and mentoring CWEB graduates as they search for child welfare employment and after they are hired into the field.

Recent graduates were asked several open-ended questions. Question content included positive aspects of the CWEB/CWEL programs, areas of possible improvement, how the CWEB/CWEL program contributed to their professional development, and recommendations that they would give prospective CWEB/CWEL students. Responses to these open-ended questions are summarized below.

Please describe the aspects of the CWEB or the CWEL program that are particularly positive.
The CWEB program really helps set you up for employment within the county. I felt extremely prepared, especially with having a longer internship and completing Foundations. (CWEB Graduate)

The CWEL program is an extremely beneficial program to anyone involved in social work. I have gained knowledge in many areas and feel I have a more empathetic understanding of people's lives in this course of work. (CWEL Graduate)

Graduates truly valued their experiences in field placements and felt that those experiences, coupled with the education they received both in and out of the classroom, helped them to enhance their social work skills. CWEL graduates felt that their education helped to expand their understanding of the challenges faced by families involved in the child welfare system and that their schools’ recognition of their unique experience and skill set bolstered their confidence in the field. CWEB graduates felt that the breadth of experiences during their field placements and the Foundations training prepared them for employment as a child welfare caseworker. Both CWEB and CWEL graduates were grateful for the support they received from the universities they attended, their child welfare agencies, and the faculty and staff at the University of Pittsburgh during their respective programs. Like previous years, the financial advantages from these programs were also seen as a great benefit.

When asked about areas of possible improvement, CWEB graduates reported that they wanted better communication between their home schools and their field agency. CWEB graduates also desired a way to build a cohort amongst themselves; some options included a yearly conference for CWEBs and a more varied itinerary for the bi-monthly Zoom calls. CWEB graduates desired clarification regarding stipend disbursement and expectations after graduation. Our experience over the years of administering the program is that key information must be repeated multiple times, and across various formats (i.e., website, student meetings, email, telephone conversations) for it to be “heard.” As in previous years, CWEL graduates wanted more flexibility with choosing their courses and internship sites. CWEL graduates also reported that coursework was repetitive with their existing knowledge and geared more towards therapy.
Part-time CWEL graduates spoke about the difficulty in completing a field placement while working full-time.

What aspects of the field or internship placement contributed the most to your professional development as a child welfare professional?

*Being able to shadow caseworkers/cases and being able to work alongside caseworkers/supervisors in order to learn was fantastic. It really opened my eyes to how child welfare actually worked. I felt that learning child welfare in that way was very stress-free and effective.* (CWEB Graduate)

*I was able to learn about the unique housing needs of many Philadelphia residents/families within my internship at the DHS Housing Unit. My field instructor was supportive with allowing me to develop a system to engage families, submit housing referrals for the Rapid Rehousing for Reunification Housing Program.* (CWEL Graduate)

*Every aspect on my internship contributed to my professional development. Working directly with families in the child welfare system as well as working hand in hand with child welfare professionals in multiple roles opened my eyes and taught me so much and allowed me to learn hands on and get so much experience.* (CWEB Graduate)

*I worked in two great units within my agency that allowed me to see how child welfare operates outside of my normal job functions. I learned a lot of things in both units that helped shaped my perspective about child welfare. I was able to work in the Adoptions unit and focus on the permanency needs of children. I also was able to work with older youth transitioning out of care, in my second-year field placement. These experiences helped me to view child welfare in a different way.* (CWEL Graduate)

CWEB graduates valued the exposure that they had to the field by shadowing experienced caseworkers. They also appreciated the ability to carry their own cases with supervision and felt that the combination of their internship experiences with the Foundations training prepared them to begin their child welfare careers. CWEL recent graduates enjoyed having their field placements within their county child welfare agency since it provided them with a broader perspective of how the different departments worked with each other and how the agency worked as a whole. Those who had internships outside their child welfare agency valued the additional knowledge that they gained about different systems; these experiences helped them to see the families on their caseloads in a different light and ignited a passion for the populations served by those field sites.

What advice would you give a CWEL or CWEB student who is beginning their program?
Stick it out. Even if it seems to be a lot it is worth seeing the success stories play out. (CWEB Graduate)

Ask questions. Don’t be afraid to put yourself out there. It will be uncomfortable at first but that will help you to grow as a professional. (CWEB Graduate)

This is a great program. Utilize all of the resources and ensure to maintain your ability to balance life stress. You can definitely grow from this program in a positive way. (CWEL Graduate)

Speaking with other students from other backgrounds and other experiences was the most helpful. Getting out of the "child welfare" bubble and networking with other people helped me gain the most experience as I went through school. I would always recommend having a good support system at work, at school and at home. (CWEL Graduate)

Both CWEB and CWEL graduates emphasized that students should advocate for themselves in their internship placements to get the most out of the experience. Graduates also encouraged those new in the program to have an open mind – about child welfare, as well as their classes and field placements – and to seek out other peers to provide additional support. Graduates encouraged CWEB and CWEL students to contact the program administrators with any questions or for additional support. Finally, graduates wrote messages of encouragement and told others to stick with the program, persevere, and not give up.

**Long-Term Graduates**

**Survey procedures and method**

Research shows that organizational culture and climate are significant factors in explaining an employee’s intention to stay in or leave a workplace. Graduates of the CWEB and CWEL programs are a fitting group of individuals to use as a barometer for assessing the climate of child welfare agencies across Pennsylvania. The Organizational Culture Survey was sent to 127 individuals who graduated from the CWEB program between Spring 2019 to Summer 2020 or the CWEL program between Fall 2019 to Summer 2020, regardless of their employment status in a public child welfare agency. Forty-nine surveys were returned for a response rate of 39%. A total

---

of 7 responses were removed from the data set due to having less than 50% of survey items completed, resulting in a total of 42 usable surveys. This response rate is reminiscent of last academic year, and due to the small response size, the results may not be representative of all long-term graduates.

The Organizational Culture Survey includes 31 items that measure 6 dimensions of an organization’s culture: Teamwork, Morale, Information Flow, Employee Involvement, Supervision, and Meetings. Respondents were asked to rate their work climate on these items on a scale from 1 (To a Very Little Extent) to 5 (To a Very Great Extent). The demographic characteristics of the respondents are illustrated in Figures 15 and 16, followed by an overview of the graduates’ ratings of their organizational culture and climate.
Description of survey respondents

**Figure 145. Long-Term CWEB Graduate Demographics**

11 usable surveys, representing 16% of CWEB graduates
90% Female
Average age: 24

- Multiracial, 10%
- White, 90%
- Suburban: 50%
- Urban: 13%
- Rural: 38%

Child Welfare Tenure:
- 73% still employed in county child welfare
- 1.94 average years in current agency
- 70% still at commitment agency

Primary Work Unit:
- Ongoing: 63%
- Intake: 38%

**Figure 156. Long-Term CWEL Graduate Demographics**

31 usable surveys, representing 53% of CWEL graduates
82% Female
Average age: 38

- African American, 15%
- White, 81%
- Urban: 65%
- Rural: 23%
- Suburban: 13%

Child Welfare Tenure:
- 100% still employed in county child welfare
- 10.8 average years in current agency

Primary Work Unit:
- Intake: 42%
- Ongoing: 39%
- Administrative: 10%
What do the long-term CWEB and CWEL graduates say about the climate of child welfare agencies?

Both CWEB and CWEL graduates were predominately neutral about their work climate, with CWEB graduates feeling slightly more positive than CWEL graduates. Comparing these results to those of the 2019-2020 academic year, this year’s CWEB graduates had lower scores on every domain. However, these differences were not statistically significant. When conducting this comparison with CWEL graduates, all domains except were higher than last academic year, but none of these differences were statistically significant.

Table 7 shows the average ratings on key organizational climate items by type of graduate (as well as for the total sample). The scale ranges from 1 (To a Very Little Extent) to 5 (To a Very Great Extent), with higher ratings indicating more positive work environments.

</tbody>
</table>

For this academic year, the most positive climate scores were related to Supervision for CWEL graduates ($M=3.77$) and Teamwork for CWEB graduates ($M=3.69$). These ratings suggest that the CWEL graduates are receiving adequate supervision and value the supervision they receive in the agency. CWEB graduates seem to value peer connectedness, perhaps alluding to informal mentoring and supervision by more seasoned workers. The lowest ratings were related to Employee Involvement for both CWEB ($M=2.64$) and CWEL ($M=2.94$). This may indicate that long-term graduates don’t feel like they have a voice in agency decisions or how new policies/procedures are implemented.
Organizational climate ratings were compared according to respondents’ tenure in public child welfare (five or fewer years or more than five years). Although the ratings were neutral for both groups, respondents who worked in child welfare for more than five years rated half of the domains lower (Teamwork, Supervision, and Meetings) and half of the domains higher (Morale, Information Flow, and Employee Involvement) than those who have been working in child welfare for less than five years. However, none of these differences were statistically significant. Most domain scores decreased from last academic year regardless of participant’s tenure in child welfare. However, Teamwork, Morale, and Supervision were higher for those with longer tenure in child welfare, and Meetings increased for those with shorter tenure in child welfare.

As with last year, four specific open-ended questions were included in the long-term graduate survey to gauge how this cohort of students is contributing to the field by mentoring others, providing leadership, and pursuing professional development opportunities. These inquires allowed for a deeper exploration of leadership activities and ongoing professional development among the graduates.

Tell us about other activities you have participated in that have contributed to the field of child welfare.

Long-term graduates have been mentoring incoming caseworkers and providing valuable information to their county agencies regarding the effects of trauma on the families involved in the child welfare system. Our long-term graduates pride themselves in promoting racial equity in their agencies, strengthening families and supports by using family finding, increasing reunification, reducing out of home placements, and volunteering with charities that work with abused and neglected children. Long-term graduates are working towards strengthening the child welfare workforce by participating in continuous quality improvement initiatives, engaging in county leadership meetings, and volunteering on committees to improve the functionality of the agency.

What professional development opportunities have you participated in since completing the program?
The professional development opportunities that long-term graduates have participated in since graduating varied. Many mentioned participating in ongoing agency and county trainings, as well as trainings provided through the University of Pittsburgh Child Welfare Resource Center. Graduates described attending trainings related to supervision, sexual abuse, DSM-V, cognitive behavioral intervention for trauma in schools, and Attachment Based Family Therapy. Some graduates have obtained certifications in areas such as forensic interviewing, motivational interviewing, black mental health, and peer support. Many graduates have also either started the licensure process or have become licensed social workers.

How have you mentored colleagues or disseminated your enhanced skills to others in your agency?

Many long-term graduates have trained and mentored new caseworkers and interns. Graduates share their expertise, offer advice, provide guidance, discuss social work values, and share investigative interviewing techniques. Our long-term graduates have supervised both CWEB interns and new CWEL graduates. In addition, graduates have provided feedback to their peers in the agency to help promote best practices for the families they serve.

Leadership comes in all forms. How have you led others or championed initiatives within your agency?

Long-term graduates have shown leadership in their agencies in a variety of ways. They have served as the voice of fellow caseworkers when discussing areas of improvement in the agency. Long-term graduates have spearheaded groups to tackle Diversity, Equity and Inclusion, Anti-Racism, and improving workplace environment. One long-term graduate uses trauma-informed practices with supervisors, clerical workers, social service aides, and caseworkers to facilitate in decision making, problem solving, and teamwork. Long-term graduates have also worked to improve the accessibility of community services to underrepresented communities.

Finally, long-term graduates were given the opportunity to provide any additional feedback in an open-ended comment field. Despite the positive impacts many of them reported, some of their responses mirrored those of the current students and recent graduates. For example, some
CWEL long-term graduates felt that their new skill sets were not being fully utilized within their agencies and felt that there was limited availability for promotion or career growth. Overall, however, long-term graduates from both programs praised the education they received.

In summary, CWEB and CWEL graduates work primarily in direct services in a variety of communities throughout the state of Pennsylvania. In general, ratings of work climate were neutral for all long-term graduates. Graduates of both programs were less satisfied with Morale and Employee Involvement than other dimensions. Both are vital components of staff retention, and it would benefit county child welfare agencies to take a closer look at their organizational culture, how they are supporting their workforce, and how they are recognizing and utilizing the knowledge and skills of their CWEB and CWEL graduates.

Retaining experienced and committed child welfare caseworkers is crucial given the stressful nature of the work and the increasing levels of complexity presented by the families whom they serve. CWEB and CWEL graduates provide county child welfare agencies unique skill sets and social work values, which cannot be underestimated in promoting the safety and well-being for the children in the Commonwealth.

**Schools and Agencies**

*How do Pennsylvania schools of social work view the CWEB and CWEL programs?*

Selected individuals at the 17 participating schools of Social Work were asked to complete an annual survey regarding their involvement in the CWEB and CWEL programs. Responses were obtained from 94% of the schools, with a 72% response rate from individuals (n=30; surveys were sent to multiple respondents at each school). Almost 37% reported that their university participated only in the CWEB program, 40% only participated in the CWEL program, and 23% reported involvement with both programs.

The first part of the survey focused on the quality of the CWEB and CWEL programs, which respondents answered through 6 quantitative and 3 qualitative questions. Quantitative questions were rated on a 5-point scale from 1 (Very Poor) to 5 (Very Good). Questions asked
about collaboration between schools and staff, faculty support of students, and students’ contributions to the school’s learning environment. Qualitative questions asked respondents to describe student caliber, positive elements of the CWEB/CWEL programs, and problems or suggestions for program improvement. In the second part of the survey, respondents were asked to rate the importance of an array of core competencies and traditional criteria to select CWEB students. Results of these items can be found in the Core Competency section below.

Responses indicate that school administrators continue to be satisfied with the quality of the CWEB and CWEL programs. Ratings for both programs were high, with item averages hovering around 4.5 or above. Rankings for the top 3 highest rated items can be seen in Figure 17.

Figure 167. Highest mean values by program for school respondents

Faculty described CWEB students as, “bright, astute, and perceptive, and committed to the welfare of children” and “…high caliber students committed to the child welfare profession.”
School faculty praised the CWEB program for not only providing financial benefits to their social work students, but also for the extensive training that CWEB students receive during their internships that enable them to be ready to join the workforce. Another area of strength mentioned by the school administrators was the collaboration with the CWEB program administrators and staff at the University of Pittsburgh. School administrators have also seen the impact that the program has made in the county child welfare agencies as noted here: “Our local CYS offices are filled with CWEB alum and many of them have been in their positions for many years. I think CWEB deserves some credit for that.”

School administrators were equally impressed with the quality of CWEL students entering their MSW programs, describing them as “Very strong students, seem very committed to their learning”, and “mature, committed, and hard working. Very high caliber.” Another CWEL school administrator commented:

“The CWEL students in our program seem to be a committed, diligent and hard-working group of professionals. They are very much appreciative of the educational opportunities they have, and they seem to be aware of their professional responsibility to give back to their clients after they have obtained the MSW degree. Many CWEL students have worked in various social service agencies, so they bring a wealth of social work experiences to class discussions and are able to identify the change needs of the social welfare policy as well as of some social service delivery systems.”

The knowledge and first-hand experience that CWEL students bring into their MSW classes is incredibly beneficial to their peers, many of whom may be new to the social work field.
Like CWEB school administrators, CWEL faculty discussed the financial benefits of CWEL and the flexibility and contacts that some students have with their counties to complete internship responsibilities, even offering internship options to fellow students. The school administrators voiced some concern about a lack of opportunity for advancement for their MSW graduates once they return to their child welfare agencies. CWEL faculty also valued the collaboration and support from the CWEL program administrators and staff at the University of Pittsburgh.

*How do child welfare agency administrators view the CWEB and CWEL programs?*

Agency directors were asked to answer questions regarding the administration of the CWEB and CWEL programs and the impact and value of these programs on their agencies; they also rated the quality of CWEB and CWEL graduates’ skills and motivation. Additionally, they were asked to describe the strategies they have created to utilize CWEB and CWEL graduates’ abilities and knowledge, as well as strategies they have implemented to increase caseworker retention. Finally, agency directors were asked to rate CWEB and CWEL graduates on a series of core competencies. The results from these items are discussed in the Core Competency section below. Out of the agencies with graduates and/or current students, 80% of individuals responded, representing 82% of county child welfare agencies. In some cases, surveys were sent to multiple individuals in each agency, such as the county administrator and the person within the agency who is most knowledgeable about the CWEB and CWEL.

Respondents rated their satisfaction with the CWEB and CWEL programs and students on 22 items using a 5-point scale ranging from 1 (Very Poor) to 5 (Very Good). Items were grouped into two sections: 1) the impact the CWEB/CWEL program has had on the agency and 2) the administration of the CWEB/CWEL program. In the first section, respondents rated items about
employee recruitment, retention, and quality of staff. The second section included items referring to fiscal management and communication from the University of Pittsburgh regarding the program.

Directors consistently rated their satisfaction with the CWEB and CWEL programs and the impact of the programs on the organization culture (e.g., recruitment, retention, staff motivation, quality of practice, and interest in higher education) between the values of “Good” and “Very Good.” A depiction of the highest mean values for these two areas can be seen in Figure 18.

There were slight variations in the means for both the program impact and program administration domains from last year, with some items having higher means and some lower. The means for value of the CWEB and CWEL programs increased slightly (M=4.77; M=4.74). However, these variations were minimal, suggesting that agency administrators continue to
appreciate the opportunity the CWEB and CWEL programs provide for their agencies by enabling them to have a skilled and highly trained workforce.

As in previous years, agency directors responded to questions asking them to describe how they have created or adapted programs and assignments that utilize the skills of recent graduates. The most common strategies were planning and policy development (78%), special projects (78%), and assigning a leadership role (72%) (see Figure 19). These responses correlate with the open-ended comments that indicate that CWEB and CWEL graduates have more responsibility in their roles within the agency. Retention of skilled child welfare workers remains a concern with agency directors, especially when opportunities for advancement or promotion may not be available. In addition, job classification categories, local politics, and collective bargaining agreements all play a part in the advancement of skilled workers, as well as the ability of the workers to utilize their skills in new arenas. Until more supervisory and upper management positions are offered to CWEB and CWEL graduates, agencies will have to think of innovative techniques to keep the workforce engaged and provide them with ways to utilize their new skillsets to impact retention.
Agency directors reported a variety of specific projects in which they engage their CWEB and CWEL graduates to utilize their new skills. These have included quality assurance initiatives, providing trauma therapy and creating a trauma informed interview room, and working on a universal assessment instrument. CWEB and CWEL graduates have been integral in engaging county child welfare agencies in addressing systematic racism and providing families with resources regarding the counties’ housing programs. This specialized group of caseworkers have also been assigned cases with more complicated issues, such as adoption, independent living, substance-exposed newborns, and high-profile cases involving complex trauma. In addition, CWEB and CWEL graduates have been vital to creating new processes and procedures to improve the child welfare agency, including the implementation of a diversion program to decrease the number of families entering child welfare, initiatives to boost staff morale and increase retention, and working on plans of safe care.

**Core Competencies**

Agency and school administrators, as well as supervisors/mentors of CWEB students, were asked to rate CWEB program participants on 10 core competencies that the research literature
suggests are important for a successful career in child welfare. These competencies are: (1) interpersonal skills; (2) adaptability; (3) communication skills; (4) observation skills; (5) planning and organizing work; (6) analytic thinking; (7) motivation; (8) self-awareness/confidence; (9) sense of mission; and (10) teamwork. All align with the prescribed core competencies for selecting qualified applicants for child welfare work.\(^\text{30}\)

CWEB mentors/supervisors were identified from the pool of current part-time CWEL students and from recent and long-term CWEB and CWEL graduates who indicated that they supervise/mentor CWEB students in their agencies. The 10 items were rated using a 5-point scale. The anchors for the Likert scale differed based on respondent type. School administrators were asked to rate the importance of the core competencies in selecting candidates to participate in the CWEB program; these items were rated from 1 (Not at All Important) to 5 (Extremely Important). Agency administrators and CWEB supervisors/mentors were asked to rate the competencies of CWEB students/graduates with whom they worked (as a group); these items were rated from 1 (Poor) to 5 (Superior).

In addition to the core competencies, school administrators were asked to rate (using the same scale) the importance of 6 more traditional criteria when selecting CWEB students – student GPA, writing ability, faculty recommendation, financial need, engagement in extracurricular activities, and interest in working with children and families. Agency administrators and mentors/supervisors of CWEB students were asked to rate the CWEB graduates/students in their agency on the core competencies. For these items, every respondent was prompted to rate interpersonal relations, communication skills, and self-awareness/confidence. To reduce respondent burden, 2 of the 7 remaining core competencies (adaptability; observation skills; planning and organizing work; analytic thinking; motivation; sense of mission; teamwork) were randomly selected for each participant.

Responses indicate that school administrators value the core competencies for selecting child welfare workers but place equal value on some of the traditional markers of qualification. Tables 8 and 9 illustrate these findings. The most highly rated item of the 10 core competencies was “interpersonal relations” ($M=4.72$), and the lowest rated item was “teamwork” ($M=4.00$). Of the traditionally valued items, the most highly rated item was “student has an interest in working with children and families” ($M=4.71$). The lowest rated items, “student’s financial need” ($M=3.17$) and “student’s engagement in extracurricular activities” ($M=2.83$), had significantly lower scores than any of the items included in the core competencies. Predictably, “student GPA,” “student’s writing ability,” and “faculty recommendation of student to the program” all received ratings above “very important” ($M=3.94$, $M=4.11$, $M=4.06$, respectively).

</table>
Like the school respondents, agency administrators were asked to rate CWEB and CWEL graduates on the core competencies. Ratings for both CWEB and CWEL graduates hovered around the “Good” to “Very Good” range. See Table 10 for the ratings for all 10 competencies. Respondents rated the CWEB graduates highest in “teamwork” \((M=4.43)\), and lowest in “adaptability” \((M=3.57)\). Respondents rated CWEL graduates highest in “analytical thinking” \((M=4.38)\) and lowest on “motivation” \((M=3.83)\). Developmental differences and depth of exposure to the child welfare field likely explain these differences among CWEB and CWEL participants.

Because agency administrators may be far removed from frontline CWEB caseworkers, the core competency questions were added to the current student, recent, and long-term graduate surveys. Like the agency administrators, CWEB supervisor/mentor ratings of CWEB participants in their agency were in the “Good” range. Table 11 shows the mean ratings on all 10 core competencies. CWEB students/graduates were rated highest on “sense of mission” \((M=4.25)\) but appeared to need some improvement in “motivation” \((M=3.00)\) and “planning and organizing work” \((M=2.50)\).
A series of statistical analyses were conducted to explore the following: 1) did agency respondents rate CWEB and CWEL graduates differently on the 10 core competencies; 2) were there differences between the core competencies that school respondents looked for in CWEB applicants and the core competencies the agency respondents saw in CWEB recent graduates; and 3) were there differences in the ratings of core competencies in CWEB participants when comparing school administrators, agency administrators, and CWEB supervisors/mentors? Independent t-tests were conducted to answer the first two research questions. The third research question was addressed by using a Kruskal-Wallis Test to determine statistically significant differences between two or more groups on a series of variables rated on a Likert scale.

Looking at the first question regarding the core competencies, there were no significant differences in the agency administrators’ perceptions of the core competencies when comparing CWEB and CWEL graduates. This non-significant finding mirrors last year’s results but is different from previous years where CWEL graduates are rated higher than CWEB graduates. Perhaps this can be attributed to better selection criteria and support for CWEB students, thus leading to more competent child welfare caseworkers. Several significant results were observed between the school respondents’ ratings of the core competencies when considering CWEB applicants and the competencies that agency respondents felt that CWEB graduates possessed.
School respondents rated “communication” ($t=-3.25, p=.002$), “planning and organizing work” ($t=-2.33, p=.038$), and “self-awareness/confidence” ($t=-3.76, p=.001$) significantly higher than agency administrators. Comparing this year’s analyses to last year’s, “self-awareness/confidence” was once again significant. Overall, school administrators rated CWEB graduates more positively on most competencies, whereas county administrators rated the CWEB students lower on more competencies.

In the Kruskal-Wallis H test, mean ranks are used to determine if there are any differences between the groups (e.g., school administrators; agency administrators; CWEB supervisors/mentors). These ranks can be used to determine the effect of the role of the respondent to the CWEB student on the ratings of the core competencies. It is important to note that this statistical test will not determine where the differences between the groups lie, just that a statistically significant difference was observed.

The Kruskal-Wallis H test in these analyses showed that there were statistically significant differences between school administrators, agency administrators, and CWEB supervisors/mentors on four of the core competencies, “interpersonal relations”, “communication skills”, “planning and organizing work” and “self-awareness/confidence.” Respondents differed in their ratings of “interpersonal relations,” $\chi^2 (2) = 14.46, p=.058$ with mean rank ratings of 39.00 for CWEB supervisors/mentors, 48.56 for agency administrators, and 72.14 for school administrators. “Communication skills” differed significantly between respondents $\chi^2 (2) = 9.93, p=.007$ with mean rank ratings of 38.85 for CWEB supervisors/mentors, 49.52 for agency administrators, and 68.44 for school administrators. Respondents also differed with their ratings of “planning and organizing work” $\chi^2 (2) = 6.22, p=.045$ with mean rank ratings of 3.25 for CWEB supervisors/mentors, 14.03 for agency administrators, and 18.20 for school administrators. Finally, significant differences were observed for “self-awareness/confidence”, $\chi^2 (2) = 9.77, p=.008$, with mean rankings of 41.65 for CWEB supervisors/mentors, 48.87 for agency administrators, and 72.14 for school administrators.
administrators, and 69.00 for school administrators. The full results of the Kruskal-Wallis H test can be seen in Figure 20.

**Figure 20. Mean Ranks of Core Competencies.**

These results suggest that people within the child welfare agency are viewing CWEB program participants differently on “interpersonal relations,” a characteristic which encompasses respect and tolerance for people, relating well to others, and empathy. These skills may be viewed differently in an academic versus professional setting. Interestingly, the CWEB supervisors/mentors rated every core competency lower than the other two respondent groups, suggesting that their interactions with CWEB program participants might be a more accurate gauge of the presence of these competencies within their agencies. Again, transfer of learning activities may need to be strengthened to help students utilize classroom knowledge and skills in their practice. However, these gaps are smaller between the CWEB supervisors/mentors, and the county
agency administrators. This may indicate that agency administrators are more attuned to the competencies of CWEB graduates now than in previous years.

**Overall Summary**

COVID-19 continued to impact our CWEB/CWEL students, graduates, school, and county partners. Most of our partnering schools resumed in-person learning for the Fall term with masking and social distancing mandates in place. Our recent CWEB graduates talked about the effect the COVID-19 pandemic had on their field experience and how prepared they felt for full-time casework. Each county child welfare agency had a different approach to the COVID-19 pandemic, some working entirely remotely and some doing a hybrid in-office/remote schedule. A few of our county child welfare agencies are now requiring vaccination to be employed by the agency, which will need to be communicated to prospective CWEB students as they decide on potential county agencies to complete their commitment year.

The stakeholders of the Title IV-E education programs continue to praise the CWEB and CWEL programs and students and acknowledge the value of these programs to the Commonwealth. County administrators are enthusiastic to hire CWEB graduates and wish more of their staff took advantage of the CWEL program. The CWEB and CWEL programs provide Pennsylvania’s county child welfare agencies with a mechanism for building a well-educated workforce and provide an opportunity to infuse core social work values into casework practice. CWEB and CWEL program participants are extremely grateful for the opportunity to participate in these beneficial educational opportunities and see the programs as a mechanism for being an agent of change in child welfare and assurance of more strengths-based solutions to youth and families. CWEB and CWEL graduates are also actively participating in diversity, equity, and inclusion efforts within their agencies to combat the racial disparities that exist within the child welfare system.

CWEB and CWEL students continue to thrive both academically and professionally. Over 25% of CWEB and CWEL current students, recent graduates, and long-term graduates have
received an award or recognition in the past year, and almost 20% were on the dean’s list, graduated with honors, or became a member of a national honor society. Many participants were recognized for accomplishments in their county agencies by receiving praise from supervisors, administrators, families on their caseloads, receiving “employee of the month” awards, promotions, or creating new initiatives within their agencies. A CWEL graduate received the prestigious Children’s Champion Award from the Children’s Resource Center for his outstanding effort in combatting child abuse. Awards and accomplishments can also come in the form of creating a thriving program, which is what one CWEL long-term graduate has done by developing an Affirming Queer and Trans Clinical Therapy program for young people, a similar program for Trans and Queer Tweens, and a client-led Hormone Replacement Therapy letter writing program. These efforts have created safe-spaces and opportunities for some of our most marginalized children in the LGBTQ+ community. CWEB and CWEL students continue to prove that they are the premier professionals in the field and make their individual marks in child welfare.

Since promotions, raises, and opportunities for advancement may be difficult for some counties to offer to CWEL graduates, it is important for county administrators to create meaningful opportunities for this group of child welfare workers to utilize their newly developed skills in the agency. Counties may consider creating mentoring programs where more senior CWEB/CWEL staff provide assistance and guidance to new caseworkers. Another option could be to generate peer connections among CWEL graduates and those starting the CWEL program as an additional level of support for new CWEL students. Counties can also find other ways to acknowledge the hard work and dedication of their CWEB and CWEL employees such as internal awards or recognition. These praises can boost the morale of our graduates and let them know they are valued by their agencies. With the implementation of the Family First Prevention Services Act, counties should consider utilizing their CWEB and CWEL workers to help spearhead the continuous quality improvement requirements of selected evidence-based practices. CWEB and
CWEB graduates have unique skills that enable them to create positive change in the child welfare workforce – to keep them engaged and interested in the work requires support and creative thinking on the part of supervisors and county administrators and will provide the county with numerous benefits.

Discussion

CWEB

After twenty years of operation, the CWEB program has made a remarkable impact. Fifteen universities, 62 counties (offering internship and/or post-graduation employment), and 1,300 graduates have made major investments in its operational success. Strong collaboration has enabled the program to prepare individuals for work in public child welfare and county agencies report actively recruiting CWEB graduates. Figure 21 shows the impact of the CWEB program on the county child welfare workforce.

Figure 21. CWEB County Participation

Most CWEB graduates enter the field with a substantial portion of foundational training completed and have had exposure to child maltreatment investigations, the court process,
multidisciplinary team meetings, and family conferencing. They have had opportunities to shadow experienced caseworkers, observe family visitations, participate in unit and agency-wide meetings, and attend community engagement activities. Overall, CWEB graduates have obtained a well-rounded, beginning experience in the complex, multifaceted field of public child welfare practice.

As shown in Figure 21 above, CWEB graduates have entered the child welfare workforce in 91% of the counties in Pennsylvania. This is evidence of the strong effect that our undergraduate education program continues to have on child welfare services across the state. Evaluations over the past 20 years have been helpful in suggesting program improvements, as we continually analyze the data and use lessons learned to make program improvements. We have refined our admission criteria and review process and have instituted a more intensive case management process to ensure successful outcomes. One of the benefits of the case management component is an increased enrollment of CWEB students in the state-mandated competency and skills-building training, *Foundations of Pennsylvania Child Welfare Practice*. CWEB students are assigned to a Resource Specialist at the Pennsylvania Child Welfare Resource Center who assists them with enrollment in Foundations and the initiation of their certification training record. This process also establishes a connection between the incoming child welfare student and the Child Welfare Resource Center that will continue when the student becomes a county child welfare employee.

In addition, CWEB students are invited to participate in supportive bi-monthly Zoom calls with CWEB program administrators from the University of Pittsburgh where discussion takes place on topics such as enrolling in Foundations, submission of necessary paperwork, the hiring process, and their education and internship experiences. In this reporting period, six of these Zoom calls were held with participation averaging close to 20 CWEB students per call. In fact, many of the CWEB students who participated in the first call also participated in follow-up calls, showing that this new initiative is appreciated and welcomed by the CWEB students.
Navigating the county hiring process continues to present challenges for students. Pennsylvania counties fall into one of two categories: Civil Service and Merit Hire. Currently, about 2/3 of Pennsylvania Counties remain in the Civil Service and follow standardized Civil Service processes when hiring new employees. The remaining counties have been granted permission to create their own Merit Hiring processes which are county specific and can be very different county to county. We work closely with students to help them understand and navigate both Civil Service and Merit Hire employment processes so that they have employment options in counties throughout the state. A statewide workgroup has been formed to address caseworker qualifications, develop a specific county child welfare caseworker position description, and refine the current county Civil Service process.

Barriers to the timeliness of hiring CWEB graduates have been successfully resolved for the most part and are always subject to economic and political change at the local and state level. Close follow-up by the CWEB Academic Coordinator and the CWEB/CWEL Agency Coordinator has resulted in most graduates securing county agency employment within 60 days of graduation. In some instances, state and/or county budgets or Civil Service issues have required an extension beyond 60 days for securing county agency employment. In addition, there have been additional delays for CWEB graduates to obtain the necessary background clearances to start working in county child welfare agencies due to the COVID-19 pandemic. Despite these challenges, most recent CWEB graduates are gainfully employed. Some recent graduates of the CWEB program who completed their internships during the COVID-19 pandemic have shared that their field experiences were limited. As these graduates were hired, agencies have been understanding of the barriers existing during internships and cognizant of the adaptations made due to COVID-19. The CWEB/CWEL Agency Coordinator has been working with these graduates and counties to provide support and additional training in the areas of need.

We continue to make concerted efforts to connect graduates with agencies and provide technical support for resume development and interviewing skills. Students may pursue
employment in any county in the state and many are able to remain in the county where they completed their internship. However, there are some students who are reluctant to relocate and who live in areas where there are no immediate openings. When students fail to follow through on their contractual obligation, the CWERP program initiates a targeted collection procedure that can include obtaining a court judgment against the student. This is rarely necessary as nearly all students honor their obligations, and agencies are anxious to hire CWEB graduates due to their social work education and county child welfare experience.

As discussed previously, and well-known to all who work in the child protection system, a career in public child welfare is not for everyone. The process of student discovery is a normal, healthy course of action which results in decisions that benefit both students and counties. The CWEB program facilitates that process through counseling with the students and graduates and then providing a professional, business-like collection system for reimbursement when necessary. Repayment can be discontinued for those who are initially in default, but subsequently become employed in public child welfare.

Suggestions for CWEB program improvement and our action plan are summarized in the recommendation section below. Some suggestions are new, while others are ongoing or have been addressed.

**CWEL**

After 26 years of operation, the CWEL program has continued to reach additional students and counties while maintaining its commitment to close, collaborative working relationships with the Department of Human Services, students, county agencies, and schools of social work in Pennsylvania. The number and diversity of counties has increased over time, enrollment continues to meet projected goals, and the number of applications typically matches the number of budgeted student openings. The program is acknowledged as providing students with a valuable educational experience, which they regard as useful in their child welfare practice, and as a major asset to public child welfare in Pennsylvania. Feedback indicates that the program is well-administered.
and user friendly. It is credited as having a long-term impact on public child welfare practice and as a positive element in the continuing challenge of worker retention.

We have responded to concerns regarding school program availability in certain areas of the state by including the fully online MSW programs of several schools in our consortium. Students have the option of considering three fully online programs in addition to campus-based programs. Many programs now offer a combination of in-person and remote course options, with most schools still operating under flexible conditions as the state of the pandemic and need for social distancing continues. We will continue to be as flexible as possible to meet the needs of our constituents while still maintaining the integrity of the academic and field expectations for our program. Our experience thus far has been that while students appreciate the convenience that online programming provides, there is also a sense of fatigue that occurs with online coursework. Many students have expressed that they miss the opportunity to engage in-person with their fellow students, professors, and school staff persons in a remote learning environment. Other students are satisfied with online coursework for the most part, but highly dissatisfied with the impact the pandemic has had on their internship opportunities.

CWEL students contribute to human service programs in both the public and private sector during their graduate studies through active engagement in field work in a variety of community-based agency settings. In turn, county agencies benefit from the expanded knowledge that CWEL students bring to the county. Figure 22 below illustrates the breadth of programs that benefit from the skill and expertise of our child welfare students. We also take note again of the impact that the COVID-19 pandemic had on internship experiences during the 2020-2021 Academic Year. Many agencies were operating remotely for most of the time and there were reduced opportunities to work directly with clients. The Council on Social Work Education reduced the amount of internship hours for both undergraduate and graduate students considering the pronounced challenges in field education. Work-based field options were expanded, online learning modules
were permitted as partial fulfillment of field work hours, and allowances were given to complete both course and field requirements.

By completing a field experience at an agency in the private sector or within another publicly funded program, students gain valuable information regarding systems, policies, service
mandates, and intervention strategies. In turn, students transmit their experience and knowledge of child welfare policies and procedures to provider agencies that may have limited understanding of child welfare services. Students are encouraged to go outside their comfort zone to gain experience with a new service modality or intervention, client population, or service setting in which they may have limited knowledge. All this learning and collaboration occurs as our students share their expertise and enrich their skills through internships with public and private provider agencies. Students then bring new knowledge and skills back to their child welfare agencies and are well prepared to contribute to practice initiatives such as teaming and conferencing, connection to evidence-based treatments, and the use of enhanced assessments.

A main goal of the CWEL program is the development of leadership within child welfare. We follow the career path of our participants and observe that CWEL graduates currently hold county agency management/administration positions in 45% (30/67) of Pennsylvania counties. Of note within that group, 5 of our CWEL leaders were also previous CWEB graduates. In addition, many CWEL graduates and current CWEL students hold supervisory positions or roles that involve mentorship, quality assurance, and practice initiatives such as teaming and conferencing. Of note, seven CWEB graduates also occupy high-level county leadership positions.

We applaud the promotion of our graduates into these key leadership roles and the new vision and energy that they bring to public child welfare. Figure 23 illustrates this impact and includes leaders among both the CWEB and the CWEL programs. Efforts continue to be directed toward gathering comprehensive data on leadership activities among our graduates as we believe that the data shown below is an underestimate of the actual leadership being displayed by our program graduates.
Narrative responses gathered during the program evaluation contain several suggestions. These responses are obtained through open-ended comments on the evaluation instruments and then verified through key informant focus group sessions. Some suggestions are impractical or impossible to implement. Others are based upon misinformation. Most of the suggestions gleaned from the evaluation of both programs over the years, however, point to important questions and ongoing themes that bear thoughtful review. Several of these will be highlighted because they have come from multiple sources, are reported in different ways, and have become persistent themes. All partners ought to be thinking about strategies to address them over subsequent review periods.

One prominent and persistent theme concerns the climate, salaries, job classifications, assignments, and opportunities for career development which graduates of the CWEL program encounter upon their return to the county agencies. The following key points have been repeated by multiple respondents and noted consistently in our annual program evaluations:
• difficulty in negotiating assignments that capitalize on the returning worker’s new skills, knowledge, and advanced training;
• lack of differentiation in job classifications among workers with and without graduate degrees;
• lack of salary incentives in most counties;
• hostile, skeptical, and jealous reception workers sometimes face upon return to their agency after graduation;
• scarcity of opportunities for promotion in many counties;
• lack of opportunities for leadership and/or a voice in decision making;
• the sense that advanced educational achievement is not matched with respect and growth opportunities.

In some counties, returning graduates have been embraced and invited to participate in creative and challenging assignments that are advantageous to both the worker and the agency. Participation in Quality Services Reviews (QSRs), membership in committees associated with Pennsylvania’s Practice Improvement Plan, membership in specific workgroups (i.e., Family First Prevention Services Act implementation, universal assessment, Diversity Taskforce, CAST curriculum, TA Collaborative, CWIS, implementation of the newly revised Supervisor Training for new supervisors) are a few of the projects that benefit from the expertise of CWEL graduates. Many graduates are also involved in practice initiatives such as the early developmental screening of young children, family teaming and conferencing (e.g., Family Group Conferencing, Family Teaming, Family Group Decision Making), Family Finding, and enhancing the use of data-driven decision making. The use of evidence-based treatments in child welfare to prevent higher levels of care and out-of-home placement is an important area where CWEL graduates can be agency champions and leaders. CWEL graduates are invited to become mentors and supervisors of CWEB students in their agencies; many assume prominent roles in leading youth and family engagement practices, and others are active in continuous quality improvements initiatives within their agencies.
counties. Many current trainers and consultants of the Pennsylvania Child Welfare Resource Center are CWEL graduates. Graduates are also members of statewide committees and workgroups. Other have involved themselves in the education of future child welfare professionals by becoming adjunct instructors at schools of social work and/or supervisors to CWEB interns.

The contrast in the moods of those graduates who have enrichment opportunities and those who do not is stark. One group of graduates speaks of long-term commitment to public child welfare and the other group is beginning to think of alternative ways they can serve children at risk and their families where the opportunities may be a better fit with their skills. Graduates do not speak of defaulting on their commitments; when they do contemplate other options, such as moving to employment with private providers or other human service entities after completion of their commitments, they do so with sadness for the most part. **The CWEL faculty views the comments of graduates about agency climate as representative of the key deciding element in child welfare employee retention.** Our research, and that of others, strongly supports this finding. Counties and agencies that ignore these concerns should not be surprised by the loss of valuable staff. While there is extensive research evidence of the importance of non-salary factors in retention (see Appendix L), the results of this and previous reviews affirm that salary remains a very important issue in Pennsylvania. **Along with supportive agency working conditions, adequate compensation is critical to the stability of our child welfare workforce.**

Well-educated and skilled professionals who serve children at risk and their families will benefit public child welfare wherever they practice and will return the investment made on their training by the taxpayers many times over. However, a major opportunity will be lost if agencies do not take full advantage of the skills, optimism, and enthusiasm of the returning workers. Retention has always been one of the goals of federal funding for child welfare training and is central to the mission of the CWEB and CWEL programs. It is well known from research conducted over two decades ago that workers who are skilled in the services they are asked to
provide and who receive strong agency support have higher retention rates\(^{31}\). All indications suggest that CWEB and CWEL students have received excellent training and education. It remains for the partners in this enterprise to be creative, innovative, and energetic in following through with organizational change after the graduates return. The 12 or more months CWEB students and the 20 or more months full-time CWEL students spend in educational preparation is very modest when compared to the many years their potential child welfare careers will span following graduation.

CWEL has a remarkable record of retention. Of the 1,541 graduates who have completed the program, only 20 have failed to complete their work commitment over a 26-year period. Another 924 have resigned after completing their commitments for all reasons. Again, these reasons include not only voluntary departures from child welfare employment, but also retirement, death, permanent disability, relocation of a spouse, and a variety of other unique circumstances. This represents an overall loss rate of only 8.2% a year for the life of the program. Figure 24 below illustrates retention among our graduates at one, five, and ten-year intervals post-commitment. The average commitment period is approximately 1½ years. This commitment calculation includes individuals who were awarded advanced standing in their academic program by virtue of having a BSW/BASW degree, those who completed a full, two-year academic program, and those who obtain CWEL funding for only a portion of their academic studies. Figure 24 below shows that of those whose commitment ended over 10 years ago, almost 40% remain in their agencies nearly 12 years after graduation (1 ½ years average commitment plus 10 years post-commitment). This does not include those who continued in the child welfare field in other agency settings.

The research literature on long-term retention of workers with no legal work commitment clearly shows the importance of agency climate, quality of supervision, intrinsic worker fulfillment, job satisfaction from appropriate assignments, and personnel policies, along with salaries, as some of the keys to long-term retention\textsuperscript{32,33,34}. Unfortunately, there is little that CWEB or CWEL alone can do about any of these important factors. It is critical for the Department of Human Services, the University, county agencies, and PCYA to work together in implementing multiple strategies to address organizational and workforce issues. Organizational effectiveness interventions provide a structure for defining, assessing, planning, implementing, and monitoring workforce development strategies\textsuperscript{35}. While implementation at both the state and county levels is highly political and often difficult, we believe that our longitudinal research on the retention of CWEL students and our expertise in organizational effectiveness can inform this important work. The National Child Welfare Workforce Institute (NCWWI) has provided leadership in capacity

building among middle managers and supervisors, as part of an overall change strategy for the child welfare workforce (see http://www.ncwwi.org).

The subject of the advantages and disadvantages of full and part-time study continues to surface among the CWEL students. We have made the following points in previous annual reports and repeat them here. Clearly, full-time versus part-time enrollment is one of the areas in which county differences occur. We acknowledge that workforce size and capacity is one of the primary factors driving county-level decision making about approval for an employee to attend school. We also understand that collective bargaining agreements may influence permissions and the selection process. We recognize the authority of County Commissioners to enter into contractual agreements regarding their county agency staff. We also note that there is no doubt from student evaluations and the many years of collective wisdom among our partnering schools that the educational experiences of full-time students are clearly superior. Full-time students have many more opportunities to interact with their academic advisors and other faculty outside of class sessions, more time to network with other students, more time available for academic research and study groups, more choice of elective courses, more time to write papers and prepare other assignments, and more options for completing their internships. They can do this with less commuting, less stress from work-related responsibilities, less conflict between work schedules (e.g., court appearances) and class schedules, and less time away from their family responsibilities.

The tuition for full-time completion of a degree is also less than for part-time study. Full-time students require only half as much time or less to complete the CWEL program. This means a quicker return to full productivity in the agency. Part-time students often take as long as four years to complete, and there is a higher rate of academic disruption (and sometimes program discontinuation) among part-time students compared to full-time students. Three to four years is an extraordinary amount of time for students to be balancing the demands of child welfare work, academic studies, and the other responsibilities in their lives. Our experience over the past 26
years has shown that part-time students are at a substantially higher risk for program discontinuation compared to full-time students.

A frequent agency concern with full-time study for CWEL students is whether the agency can fill the position while the student is away for full-time study. The counties that have hired replacements have experienced no major difficulties and have been able to do so without any financial cost because of the reimbursement they receive for the salary and benefits of the trainee in school. Schools and students almost unanimously favor the full-time model. Of the withdrawals from the program prior to graduation, seventy-six percent (76%) were part-time students. Our discussions with these students confirm that the challenges inherent with part-time study, such as stress and scheduling, were the determining factors. These are serious, costly, and unnecessary losses. Even the most conscientious caseworker and diligent student can manage only a finite number of competing demands for time, attention, and action before something gives way. For most every child welfare professional (and certainly not exclusive to those in school), the sacrifices most often are made are those that are personal, such as advanced education, self-care activities, time with family and other forms of fulfillment.

Another county agency concern with full-time study is the belief that part-time students are likely to have higher retention rates after graduation. There is absolutely no evidence for this contention. By far, the greatest number of complaints and the most impassioned concerns from part-time students are that they are not permitted to engage in full-time study. These students are angry, bitter, under pressure from their families, sleepless at night because of their worries over the children in their caseloads, and some express a determination to resign as soon as their commitments are completed. We have witnessed this during the history of the CWEL program and know from our collaborative work with other IV-E programs across the country that high levels of stress among part-time students is a universal phenomenon. We believe that only authorizing part-time study is a shortsighted and counter-productive agency policy.
Part-time study while working full-time is difficult under the even most ideal circumstances. The competing responsibilities of work, home, and school are encountered by all part-time, working students. This reality is compounded for child welfare students by the demands of the job (i.e., court dates, unanticipated emergencies, staff shortages). During the past several years, these stressors have continued to be amplified by budget crises, increased incidents of racial injustice, and an overall unpredictability of the national political landscape. Additionally, the devastating impact of the COVID-19 pandemic, coupled with the resulting economic and personal losses along with a client population besieged by opioid addiction, has overloaded the capacity of the child welfare system. These issues are not unique to Pennsylvania.

As a primarily rural state, Pennsylvania has many counties with a low population density. The size of the county agency workforce ranges from 700 in the most populated urban area to a workforce of four in one rural county. Clearly, in smaller counties a reduction of even one individual in full-time study represents a huge loss for the workforce. Full-time study may not be feasible. For part-time enrollment to be viable and more satisfying for participants, both counties and schools need to be flexible with scheduling and provide enhanced supports to assist employees/students in the balancing of multiple responsibilities. This is a necessary workforce investment.

On-line degree programs are often viewed as a solution for decreasing the stress associated with part-time study. While offering accessibility, on-line coursework of quality and merit is both rigorous and time-consuming. Students and agency administrators must be careful of the misperception that on-line course work is synonymous with no disruption to work responsibilities or to family life. Field placements are required, and synchronous courses involve the same designated meeting time as in-person classes. There is often little flexibility regarding due dates and completion of required assignments. Our small pilot study conducted with CWEL students enrolled in an on-line child welfare course several years ago found that although the students valued the convenience of the on-line option, they missed the interpersonal connection with their
faculty and peers and would have preferred face-to-face contact. The validity of these preliminary findings have been reinforced during the last program year when most universities were operating remotely. Convenience aside, most students and faculty prefer in-person learning and find it more conducive to knowledge and skill development when safety measures are maintained.

Administratively, only full-time students may be used by the University in generating the substantial matching funds it contributes to balance the project’s budget. The CWEL program began as a largely full-time program. In the 2019-2020 academic year, roughly one-half (52%) of the newly admitted students were part-time. This serves to potentially reduce the total number of students who can participate, reduces the federal contribution to the program, and increases the state matching funds required.

Another concern which all four partners must constantly struggle with is differences in policies or requirements. With personnel policies differing across county agencies, CWEB and CWEL students in the same classroom may be subject to contrasting requirements when compared to their program peers. Curricular requirements or academic calendars among the schools may differ enough that students from the same county (but not attending the same school) also have contrasting requirements.

The CWEB and CWEL faculty are keenly aware of these differences and seek to assist our partners in being aware of alternative approaches that might be helpful. But in the final analysis, uniformity is not the goal. These are not seen as fairness issues. As long as the Title IV-E regulations are being followed, the effort has been to allow for local conditions and needs to guide local decision-making. This is true for county agencies and among schools of social work. Workers in some counties are employed under union conditions. Others are not. Small counties face somewhat different personnel issues than larger ones. Some counties enjoy a relatively stable

---

workforce with very few open positions; others are chronically understaffed. Child welfare salaries vary across the state. Counties operate under a range of governance structures (commissioners, mayors, and county executives) that exert a strong influence on policies and procedures for the human services workforce.

College or university calendars control social work department or school schedules. The number of child welfare students in each school influences the number of child welfare courses that can be offered. Minimum enrollment targets are established that determine whether a particular course can run in a given term or not. Some schools or departments of social work operate under strict operational policies that are controlled by a centralized university administration that determines which courses can be offered, in what format, and how often they can be placed on the academic calendar. Consequently, students and others who observe some differences are quite correct and refer to a diversity that is neither possible nor desirable to control centrally. It is always the goal of the CWEB and CWEL programs to provide:

1. Easy access to the programs for trainees, counties, and schools;
2. Equitable distribution of resources that assures as many schools and counties can participate as possible;
3. Streamlined administrative procedures and timely reimbursements;
4. Strict observation of Title IV-E regulations;
5. Full disclosure of all aspects of the program’s operation among the partners and to the public;
6. As little interference as possible with selection of trainees and implementation models by counties and with schools in their selection and admissions processes;
7. Recognitions of the achievements and contributions of our students;
8. Recommendations for workforce improvement.

Recommendations

We are committed to continuous quality improvement and understand that no successful program is static. Areas for ongoing focus in both programs and the action steps completed or in progress are summarized below.

**CWEB**

1. Improve successful outcomes for students by refining admission criteria and participant selection
   - Student transcripts and a personal statement regarding the desire to pursue public child welfare added to the application packet (completed)
   - Competency-based rating instrument used to assess CWEB applications (completed)
   - Periodic review of interrater reliability (ongoing)
   - Interviews held with a sample of applicants (ongoing)

2. Further guidance to university faculty on the details of civil service requirements and other technical aspects related to county internship and employment
   - Targeted discussions during informational meetings with schools and students (ongoing)
   - Discussions to include that CWEB students completing internships within non-civil service counties can also register as a county casework intern, so they are eligible for jobs in civil service counties (ongoing)
   - “Frequently Asked Questions” posted on CWERP website (completed; updated as needed)
   - Diagram of civil service/merit hire internship pathway included in student manual (completed; updated as needed)
   - CWEB presence at annual PA Association of Social Work Education (PASWE) meetings held in conjunction with PA-NASW (ongoing)
3. **Increase participation in Civil Service Social Work Internship program**

- Outreach to schools and students regarding the benefit of completing 975 hours of internship (e.g., civil service standing, exemption from SCSC exam, ability to complete foundation training as part of internship, greater marketability for hiring) (ongoing)
- County agency support for extended internship by CWEB students (ongoing)

4. **Increase successful program completion among “at risk” students (e.g., academic challenges, those experiencing unanticipated life events, foster care alumni)**

- Ongoing outreach and case management to students by CWEB faculty and staff (ongoing)
- Regular collaboration with school faculty (ongoing)
- Targeted interventions for individual students (ongoing)

5. **Increase county participation in the CWEB program**

- Collaboration with counties through CWEB information sessions that include CWEB program faculty and staff, as well as Practice Improvement Specialists and Resource Specialists from the PA Child Welfare Resource Center (ongoing)
- School-county-program collaboration in the field practicum process (ongoing)
- Presentations at PCYA & CCAP meetings (ongoing)

- Case management system pairing CWRC Resource Specialist with each CWEB student (in place and ongoing)
- Enrollment in *Foundations* during the CWEB students’ senior year and initiation of training record to document completion of modules in effect (ongoing)
7. **Improve leadership and professional development skills**

- Students are encouraged to develop leadership and self-care skills during their academic/field experience (ongoing)

- Recent passage of bachelor-level licensure in PA (Act 179 of 2014; candidates can apply to take the qualifying exam at [https://www.pals.pa.gov/#/page/default](https://www.pals.pa.gov/#/page/default))

- Plan for enrollment in CWEL program (ongoing)

8. **Improve successful job placement following graduation**

- Assistance by CWEB/CWEL Agency Coordinator in identifying county casework vacancies, facilitating referrals for interviews, and counseling regarding employment (ongoing)

- Collaboration with SCSC and with merit hire counties (ongoing)

9. **Address issues that arise in the transition to employment**

- Addition of follow-up support protocol for new graduates (ongoing)

10. **Improve dissemination of child welfare career development opportunity through CWEB and CWEL to prospective and current participants**

- Dissemination of realistic job preview video (completed)

- Informational sessions at participating schools (ongoing)

**CWEL**

1. **Alteration in commitment time for part-time students**

- We note this issue for clarification as it continues to be raised periodically. There is no option for an alteration in the legal commitment period for part-time students. The part-time student commitment period is pro-rated to avoid a longer commitment time and to promote equity. The commitment time for all participants begins upon graduation.
2. Expansion of commitment time for all participants

- This is precluded by federal Title IV-E regulations [45 CFR, Ch. II § 235.63 (b) (1)]

3. Increase county agency support for part-time students

- County agencies are encouraged to provide flexible scheduling, modified work assignments, and opportunities for field work outside the agency (ongoing)
- When difficulties arise involving a particular student, the county is actively engaged in problem solving and solution-building using a teaming model (ongoing)
- The CWEL program actively enforces a part-time academic load for part-time students. Part-time students may not assume full-time study, regardless of the source of tuition/fee payment, while participating in the CWEL program to complete school sooner (ongoing)

4. Continued focus upon agency working environment and opportunities for graduates to use their expanded skills and abilities within the agency and at the state level

- Targeted intervention with agency supervisors and administrators; collaboration with CWRC Practice Improvement Specialists (ongoing)
- Feedback to administrators (ongoing)
- CWERP faculty participation in state and national recruitment, retention, and workforce development initiatives (ongoing)
- CWEL graduate involvement in ongoing organizational effectiveness/CQI processes within counties (ongoing)
- Inclusion of CWEL graduates in state-wide practice and policy initiatives (i.e., PIP, FFPSA, Universal Assessment/Safety and Risk subcommittee, Quality Service Reviews, organizational effectiveness work, curriculum development and quality assurance committees, CWIS) (ongoing)
5. Supervision and mentorship of CWEB program participants

- CWEL graduates are encouraged to provide supervision and mentoring to CWEB students/graduates at their county agency (ongoing)

- County agency directors are encouraged to utilize CWEL graduates as field instructors, task supervisors, and mentors to CWEBs (ongoing)

6. Permission for students to major in administration or macro practice

- Students in a current administrative or managerial position are permitted to pursue an administrative or macro track. Those in direct service positions must focus on direct practice. This policy is in keeping with federal expectation that trainees are being prepared for best practice in that aspect of IV-E services to which they are assigned by the agency (ongoing)

- Students may take administration courses as electives; those approved for macro study are encouraged to take practice courses (ongoing)

- Continued exploration of cross-over option between direct practice/clinical and macro practice specializations among school programs (ongoing)

7. Increase in full-time student enrollment

- Counties are encouraged to permit full-time enrollment and hire replacement staff using the reimbursement received for the salary and benefits of the school trainee (ongoing)

8. Inclusion of advanced level child welfare coursework in school curricula, particularly in evidence-informed and evidenced-based practices

- Curricular consultation and technical assistance to schools (ongoing)
• Offering of courses targeted toward effective family engagement and teaming practices, motivational interviewing skills, enhanced assessment, trauma-informed care, and evidence-based practices (ongoing)

• Continued review of potential child welfare course offerings (ongoing)

9. **Enhance involvement of graduates in state-level policy and practice initiatives**

• Link graduates to statewide practice improvement initiatives (ongoing)

• PA’s implementation of FFPSA services, Sex Trafficking & prudent parenting legislation, involvement in CFSR/QSR reviews, and universal assessment work provide significant opportunities for graduates to become involved in high-level activities impacting the child welfare system (ongoing)

• Increase and sustain efforts to better integrate the CWEL and CWRC programs (ongoing)

10. **Gather more detailed information regarding the career trajectory of CWEL graduates**

• Efforts to develop a comprehensive workforce database for the public child welfare agencies in PA have been in process for the past two years. We envision a dashboard for each county, region, and the state at large (ongoing)

**Overall Recommendations: CWEB and CWEL Programs**

1. **Obtain ideal CWEB enrollment number at approximately 85-90**

• This target is aspirational, and we are working diligently to increase participation.

• Enrollment at U.S. colleges and universities has decreased an estimated 3.5% according to fall 2021 figures, totaling a two-year decline of 7.8% since 2019. This represented a loss of nearly 500,000 undergraduate students in the 2021-2022 Academic Year alone, continuing a historic trend that began with the start of the COVID-19 pandemic. Although
enrollment in both undergraduate and graduate programs has been trending downward since 2012, the pandemic “turbocharged” the decline at the undergraduate level. This drop has been worse at community colleges and public, four-year institutions. Community colleges, which traditionally enroll more low-income students and students of color, have seen decreased enrollments by a total of nearly 15% since 2019.37

- We will continue active recruitment efforts to increase child welfare interest among undergraduate social work majors.

2. **Maintain CWEL enrollment at approximately 150**.

- This enrollment target may need to be adjusted based on high enrollment in the 2021-2022 academic year. Partnering schools value our child welfare students. On-line course work has offered students more flexible learning forums. Evaluation data has shown that increased tenure at admission is related to retention among graduates of CWEL, serving as reinforcement of the decision several years ago to increase the minimum amount of agency tenure to two years before CWEL eligibility.

- In 2008, OCYF granted approval for regional office staff to participate in CWEL. The opportunity for state employees allows additional trainees to benefit from CWEL.

3. **Increase depth of undergraduate child welfare curriculum among schools through the development of a certificate in Child Advocacy Studies in collaboration with the National Child Protection Training Center.**

• Undergraduates currently complete one child welfare course and a public child welfare internship. The second of three courses in Child Advocacy Studies have been developed in an on-line, hybrid format. Providing these courses across schools will strengthen the child welfare course options for students and has the benefit of providing an elective option for students outside of social work who receive little, if any, content on child abuse/neglect.

4. **Add another component to the CWEL program to recruit new county employees.** These persons would never have worked in a county CYS before but would be trained and would have the same length of work commitment as that currently required of CWEL students.

• The provision in the federal Title IV-E regulations which permits the training of persons “preparing for [public child welfare] employment” provides this opportunity. A principal advantage is cost savings; the cost to the Department would be the non-federal match. The potential impact on the CWEB program must be carefully considered, however. It is possible that increasing the number of masters-prepared individuals might significantly limit the opportunity for bachelor-level graduates to obtain county employment. See 45 CFR, Ch. II §235.63 (a).

• This option is currently available to University of Pittsburgh MSW students through a workforce excellence award from the National Child Welfare Workforce Institute (NCWWI). The University of Pittsburgh/Child Welfare Education and Research Programs is one of seven sites across the country selected for this 5-year award. Specific to partnership with Allegheny County Children, Youth and Families, current MSW students complete coursework leading to the certificate in Children, Youth and Families, complete an advanced-level internship at Allegheny County CYF, and have a contractual obligation for employment with Allegheny County following graduation.
(See: https://www.socialwork.pitt.edu/researchtraining/child-welfare-programs/child-welfare-workforce-excellence-fellows-program for information.)

5. **Consideration of including the fourteen (14) private, accredited undergraduate social work programs in the CWEB consortium.**

   • Many of the schools presently participating in CWEB have small enrollments. The potential for increased participation exists if additional schools meet requirements and are approved.

   • Although the need among counties for new bachelor-level social work graduates is high, two budgetary challenges complicate what may appear as a relatively simple solution. The cost of expanding the program to additional schools would be borne largely by the Department as the University has little with which to match federal funds in the CWEB program. Tuition and fellowship payments are not subject to indirect costs. As previously noted, there has been a marked decline in undergraduate student enrollment across the country and Pennsylvania is no exception. A major driver in the consolidation of the six universities in the PASSHE network is decreased enrollment. It remains to be seen whether this consolidation may have positive benefits for CWEB enrollment. One advantage is the plan for a single Director of Field Education across each integrated university group which may enhance referrals to CWEB as there will be a single point of contact. Program expansion is an opportunity that does warrant continued discussion and consideration.

6. **Inclusion of additional social work degree programs in Pennsylvania as they become fully accredited.**

   • Increasing the number of schools has allowed for greater student access, reduction in student commuting time, and a reduction in program costs. East Stroudsburg University joined the CWEB school consortium in the 2018-2019 academic year. Several graduate programs have been approved for the CWEL program since its inception, including the
University of Pittsburgh’s Bradford campus (2002), Kutztown University (2007), and the joint Millersville-Shippensburg program (2010). Online programs at three MSW schools are approved.

- As noted earlier, MSW programs at Slippery Rock University and Bloomsburg University are in the process of obtaining full CSWE accreditation. We will explore partnership with these programs when they obtain full accreditation.

7. **Participation by CWEB/CWEL graduates in the implementation of practice changes following new legislation.**

- CWEB and CWEL students remain in an excellent position to support and assume leadership in practice changes and system reform. Local, regional, and statewide opportunities exist for participation in efforts addressing race equity in the child welfare system. Additional opportunities for larger system involvement include work related to the implementation of FFPSA, movement toward adopting a universal assessment tool to be used statewide, enhancement of family engagement practices, recent legislation regarding human trafficking, operationalization of Plans of Safe Care, trauma-informed practice, and continuous quality improvement initiatives to list a few.

8. **Incorporation of trauma-informed supervision at the county level.**

- Current students and graduates speak poignantly about needing supervisory and peer support to manage work-related stress, and of the impact of secondary trauma upon their ability to remain in the field of child welfare. We believe it is critical to address this issue. Revisions to the Supervisor Training Series developed by CWRC have placed increased emphasis on this workforce need.

9. **Consideration of a doctoral-level child welfare education option.**

- This recommendation can provide an additional evaluation arm for the Department and further our mission of establishing evidence-based child welfare practice across the state.
Child Welfare Education for Baccalaureates (CWEB)
Child Welfare Education for Leadership (CWEL)
Progress Report and Program Evaluation
January 2022

CWERP is in an excellent position to facilitate doctoral education. A reasonable objective over time might be one (1) doctoral student in each of the five (5) schools with a doctoral program. Work commitment issues require detailed discussion among all parties.

10. Transition support and ongoing connection among CWEB and CWEL graduates.

• All graduates benefit from ongoing connection and support, and coaching is particularly important for CWEB graduates who are new to public child welfare. Additionally, portfolio and resume development are essential. We have seen great success with the implementation of a voluntary post-hire contact with a child welfare consultant at three months, six months, and nine months post-hire.

• Transition back to the county agency is a distinct issue among CWEL graduates and is most problematic for those who have been full-time students. Increased attention has been paid to preparing these students for their return to the agency. Greater network support and participation in transition groups for returning students are helpful strategies. All graduates are encouraged to join special workforce or task groups through the PA Child Welfare Resource Center (CWRC). Practice Improvement Specialists from CWRC are assigned to counties throughout the state and actively engage with CWEB/CWEL graduates to provide support and enlist them in practice initiatives. Many graduates share their expertise on a statewide level by becoming trainers and/or workgroup members through CWRC.

11. Reimbursement to counties for 100% of the salaries of full-time students and for fringe benefits at the same level that the Department currently reimburses counties.

• When the CWEL program was initiated, it was decided to reimburse counties for only 95% of full-time students’ salaries. It was hypothesized that counties would pass the 5% reduction along to students and this amount in aggregate would be used as part of the non-federal matching funds required under IV-E regulations. However, this approach was
quickly abandoned. First, it became evident that federal authorities would classify contributions as “private funds” which are prohibited except under very obtuse rules this approach could not meet. Secondly, several counties continued to pay the workers their full salaries even though the counties were reimbursed as only the 95% level. Adding to this is the burden of the very low salaries that so many CWEL students earn. Those students with families find the 5% salary reduction very difficult to endure, and the inability to receive overtime pay while a student also creates a financial change.

12. Increase the caliber of the PA child welfare workforce at the front door.

• Increase educational requirements for casework positions

• Develop specific county child welfare casework classification within the State Civil Service System

• Continue to advocate at the county, state, and federal level that salaries must be adequate to compensate for the demands and responsibility of public child welfare jobs

• Develop racially equitable, race conscious, trauma-informed child welfare systems that create a community of inclusion, support, and learning for the workforce, recognizing that supervisors, middle managers, and administrators are critical to retention and that a diverse workforce better reflects the population served by child welfare agencies

• Infuse organizational effectiveness strategies into agencies through CWRC Regional Teams

• Maintain and expand the CWEB and CWEL programs so that advanced education and support for professional development remain key components of PA’s child welfare system.
Conclusions

The faculty and staff of the CWEB and CWEL programs sincerely believe the Department and the counties can rightfully be proud of the continued achievements of our child welfare education programs. Pennsylvania is a leader in workforce development and is fortunate to have an integrated education, training, and practice improvement program continuum dedicated to the child welfare system. We are gratified to be part of this remarkable venture and partnership, and sincerely acknowledge that the contributions of many others are what guide, shape, and sustain these highly acclaimed programs.

The county children and youth service administrators have been unfailingly responsive as individuals, and through their organization, the Pennsylvania Children and Youth Administrators. The Department of Human Services has continued to strongly endorse the CWEB and CWEL programs. We especially thank Teresa Miller, former Secretary of the Department of Human Services, and welcome Meg Snead into this position. A special thank you to Jon Rubin and Natalie Bates from the state Office of Children, Youth, and Families for their strong support and partnership. We also express gratitude to our OCYF Program Monitor, Desiree Weisser, for her thoughtful oversight and steadfast support of our work over the years.

Our academic partners have made major contributions to the success of our programs and that of our students. Admissions, registrations, invoices, graduations, academic schedules, course listings, internships, and dozens of other details must be coordinated and carefully attended. The State System of Higher Education has enabled eleven state universities with accredited undergraduate social work programs to become members of the consortium. The United States Children’s Bureau, and especially its Region III office in Philadelphia, has continued its strong support, not least of which is extensive funding of both the CWEB and CWEL programs.

We are proud that the CWEB and CWEL education programs have been recognized as key strengths in Pennsylvania during all three rounds of the federal Child and Family Services Review. Our graduates have assumed leadership roles in practice initiatives throughout the state and
actively contribute to shaping the future of child welfare services on the local, state, and national level. Graduates are providing direct service, serving as managers and supervisors, mentoring junior colleagues, contributing to training curricula, conducting quality improvement initiatives, leading race equity initiatives, participating in child fatality/near fatality reviews, and working as child welfare trainers and/or consultants. We are proud that an increasing number of our child welfare graduates have assumed teaching roles in Schools of Social Work throughout the state of Pennsylvania, many as adjunct professors, others as part-time clinical faculty, and some as Directors of Social Work programs.

Finally, no number of contracts, agreements, budgets, reports, curricula, faculty or any other of the myriad of academic and administrative components of this project could produce a successful outcome without exceptional students. The vast majority of the CWEB and CWEL students selected to participate in these programs have been exceptional achievers academically, as well as leaders among their peers. They have distinguished themselves through their dedication to working with society’s most vulnerable children and families, and in circumstances that involve daily exposure to upsetting situations and overwhelming crises. As always, we salute them with sincere admiration. The students’ investments, risks, energy, vision, and contributions to the child welfare system are more responsible than anything else for the continued success of the CWEB and CWEL programs in the final analysis.

A note of gratitude goes to the CWERP team members who make countless contributions to our program operations. Your work is very much appreciated. A heartfelt thanks to Rachel Winters who stepped in to help oversee the CWEB program operations this past year during a time of transition. Your commitment, support, and dedication to our programs is exceptional and we thank you sincerely.

38 To acknowledge receipt of the self-study report. To note that the institution hosted a virtual site visit in lieu of an on-site visit in accordance with United States Department of Education (USDE) guidelines published March 17, 2020. To postpone a decision and request a supplemental information report, due September 1, 2021, documenting evidence of the sufficiency of planning and resources to fulfill its mission and goals and to support its educational purposes and programs (Standard VI). To request that the supplemental information report also provide further evidence of a clearly articulated and transparent governance structure that outlines roles, responsibilities, and accountability for decision-making by each constituency (Standard VII). To direct a follow-up team visit following submission of the supplemental information report. To note the visit will also fulfill the verification requirements of the USDE guidelines. Upon reaffirmation of accreditation, the next evaluation visit is scheduled for 2027-2028.

39 To delay the On-Site Evaluation visit scheduled for Spring 2021 due to extraordinary circumstances related to coronavirus (COVID-19) interruptions and to continue accreditation. To note the institution remains accredited during a delay granted by the Commission. The Evaluation visit will be scheduled in accordance with Commission policy and procedures.

Child Welfare Research Sampler:
Training Outcomes, Recruitment, and Retention
Every year, the University of Pittsburgh, Child Welfare Education and Research Programs releases this report* on the Title IV-E education programs in Pennsylvania. As a part of this annual review, the evaluation team includes a research sampler pertaining to child welfare practice and workforce development. This research sampler is updated every year with at least 3 current journal articles regarding workforce retention.

*Past Title IV-E annual reports can be found on the School of Social Work’s webpage: http://www.socialwork.pitt.edu/researchtraining/child-welfare-ed-research-programs/cweb-cwel-annual-report
Research has identified three major themes when exploring the dynamics influencing workforce retention: organizational factors; personal factors; and supervisory factors. This document is organized using a similar framework; however, these themes are not mutually exclusive. For that reason, we have included a category of organizational/personal factors, which capture research studies that examined the combined effects of these interrelated influences on workforce retention. In addition, we have included supervisory factors in the overview of studies that explored organizational factors. Empirical evidence has demonstrated that an educated workforce is more likely to stay within the child welfare field. Journal articles related to this topic can be found in the university/agency partnership section. After identifying the factors contributing to workforce turnover, what can be done to retain skilled child welfare professionals? The next section focuses on retention strategies to retain our child welfare workforce. The final section incorporates research related to youth voice regarding caseworker retention and to training initiatives and transfer of learning of new skills with the child welfare workforce.

For convenience, hyperlinks to each section are provided below. The references are listed in alphabetical order along with a synopsis of the article, and hyperlinks to the full article.

**Organizational Factors**

This extensive report prepared by the Annie E. Casey Foundation outlines preliminary findings regarding job conditions of frontline social services workers and the problems they face. Findings show that the reasons child welfare social workers leave their jobs are heavy workload, low status, low pay, and poor supervision. Motivations to stay in their jobs are sense of mission, good fit with the job, investment in relationships, and professional standing. The report identifies eight fundamental problems that cripple all human services sectors: not finding enough quality staff, difficulty retaining quality staff, lower salaries to frontline workers than those in other jobs at comparable levels, limited opportunity for professional growth and advancement, poor supervision, little guidance and support, rule-bound jobs, and education and training that do not match the roles and demands encountered on the job.

This testimony, which is based on findings from three reports, finds that child welfare agencies face several challenges related to staffing and data management that impair their ability to protect children from abuse and neglect. Low salaries hinder agencies’ ability to attract potential child welfare workers and retain those already in the profession. Additionally, high caseloads, administrative burdens, limited supervision, and insufficient training reduce the appeal of child welfare work. This report also finds that high-quality supervision and adequate on-the-job training are factors that influence caseworkers to stay in the child welfare profession.

This study investigated the factors that contribute to job retention and turnover in both public and voluntary child welfare agencies. Two hundred and two (202) workers from voluntary agencies and 144 workers from a public agency participated in the research study, which consisted of a survey.
Results from the study suggest that public agency workers are more content with their promotional opportunities, benefits, and the nature of work when compared to voluntary agency workers. Conversely, volunteer agency workers expressed greater satisfaction with their co-workers and a higher commitment to child welfare work than public agency workers.

This mixed-methods study investigates the positive and negative aspects regarding transitioning from student intern to professional for recent MSW graduates from Title IV-E programs. In addition, the authors investigate the motivational factors that influence Title IV-E graduates to stay or leave child welfare after completing their one-year mandate. The sample includes 24 former MSW students from the Title IV-E program at Wayne State University in Michigan. All 24 participants completed surveys, and 13 agreed to be interviewed. The negative themes regarding moving from intern to employee were the transition being overwhelming and confusing, a lack of supervisor mentorship being jarring, lack of preparation and training, and fear that accompanies difficult situations like legal threats. The positive themes included co-worker support, positive internship experiences, and learning from other co-worker's stories. For recent graduates who had finished their post-graduation requirement and stayed in child welfare discussed commitment to the field, rewarding interactions with youth and families, continuing education opportunities, supportive supervisors, and a feeling of accomplishment in the field. Those child welfare workers who left after their requirement talked about mandatory overtime, concerns for safety, lack of support from supervisors, and burn out. Additionally, this study included a regression analysis exploring qualitative themes found in the interviews with quantitative data from surveys to predict retention in child welfare as an intrinsic motivation. Through this analysis, researchers found that individuals with greater intrinsic motivation derived from “loving your job” have a lower chance of remaining in child welfare. While the majority of those who stayed in child welfare also said that their love for the job was a main motivator, the findings suggest that those who are the most intrinsically motivated are exiting the field.

This study explored differences in perceptions of the child welfare agency work environment among Title IV-E education individuals who remained employed within public child welfare and those who sought employment elsewhere after fulfilling a legal work commitment. Job satisfaction, emotional exhaustion, and personal accomplishment were predictive of staying versus leaving. The evidence suggests that efforts to retain highly skilled and educated workers should focus upon creating positive organizational climates within agencies, including innovative ways to use the increased skills and abilities of MSW graduates.

Available at: http://dx.doi.org/10.1016/j.childyouth.2012.07.002

Research suggests that pay and benefits alone are ineffective to sustain a stable workforce in public child welfare. It is important to know what other mechanisms would motivate caseworkers to stay at the job. However, the relation of factors contributing to the prevalent problem of turnover in public child welfare remains unclear in part due to a lack of theoretical base in research. This study, therefore, develops a conceptual framework based on the human needs theory of Alderfer (1969, 1972) to examine what motivates caseworkers’ turnover intention. The three categories of needs are existence needs regarding pay and benefits, relatedness needs regarding at-work relationships and life-work balance, and growth needs regarding career development and fulfillment. With a secondary dataset of 289 caseworkers in a northeastern state, our structural equation modeling results show the dynamics between caseworkers’ needs and their differential impact on turnover intention. The effect of existence needs on turnover is completely mediated by growth needs. Moreover, the variable of growth needs is found to have the strongest total effect among the three need categories. Administration and management may attenuate turnover intention by enhancing caseworkers’ growth needs with respect to meaningfulness of daily practice, contingent rewards, and development of personal career goals.

Public child welfare agencies are under pressure to improve organizational, practice, and client outcomes. Related to all these outcomes is the retention of staff. Employee intent to remain employed may be used as a proxy for actual retention. In this study, public child welfare staff in one Midwestern state were surveyed using the Survey of Organizational Excellence (Lauderdale, 1999) and the Intent to Remain Employed (Ellett, Ellett, & Rugutt, 2003) scales to assess the extent
to which constructs such as perceptions of organizational culture, communication, and other areas or organizational effectiveness were associated with intent to remain employed. Several statistically significant relationships were identified which were presented to the public agency for use in the development of strategies for organizational improvement. Data were also analyzed regionally and based on urban/suburban/rural status to enable development of targeted approaches. This case study presents an example of how ongoing measurement of organizational effectiveness can be used as a strategy for organizational improvement over time in the child welfare system.

Available at: [http://www.socialwork.msu.edu/outreach/docs/ResilientCWWinterviews.pdf](http://www.socialwork.msu.edu/outreach/docs/ResilientCWWinterviews.pdf)

This study involved interviews with 21 child welfare supervisors and frontline workers who were identified as “resilient” by their child welfare agency director. The goal was to identify factors related to worker and supervisor resiliency. Telephone survey interviews were conducted that included 26 open-ended questions. Results suggested several strategies to inform child welfare training curriculum and recruitment efforts. This includes providing internship or volunteer opportunities for individuals interested in child welfare work prior to their actual application, maintaining a friendly, flexible, and positive work environment, enhancing supervisory support for new workers in their first year, and having clear job descriptions. Veteran workers also reported that lower caseloads, higher salary, training, workshops, and attentiveness to prevent burnout have also contributed to their tenure in the agency.

Available at: [http://www.tandfonline.com/doi/full/10.1080/155487310037993#tabModule](http://www.tandfonline.com/doi/full/10.1080/155487310037993#tabModule)

The recruitment, preparation, support, and retention of public and private agency child welfare staff working with abused and neglected children and their families are important and ongoing concerns. During the past two decades, many questions have been raised about the adequacy of the child welfare workforce and the supports provided to it. This article provides the findings from a review of efforts to strengthen the child welfare workforce in the context of class-action litigation for system reform. The lessons learned provide a useful framework for current and future efforts to improve the child welfare workforce, both within and without the context of litigation.

**Fernandes, G.M. (2016). Organizational climate and child welfare workers’ degree of intent to leave the job: Evidence from New York. Children and Youth Services Review, 60, 80-87.**

With increasingly unstable workforce in child welfare agencies, it is critical to understand what organizational factors lead to intent to leave the job based on job search behaviors. Using recent survey data collected among 359 child welfare workers from eight agencies in New York State during 2009–2011 and a Structural Equation Model (SEM) method, this study examines the relationship between employee perceptions of organizational climate and the degree of intent to leave the job (thinking, looking, and taking actions related to a new job). Fifty-seven percent (n = 205) reported
that they had considered looking for a new job in the past year. Bivariate analyses indicated that there were significant differences between those who looked for a job and those who did not look for a job in the past year. SEM analysis revealed that four organizational climate factors were predictive of decreasing the degree of intent to leave the job: Perceptions on organizational justice was most predictive factor for thinking of a new job followed by organizational support, work overload and job importance. The findings of this study help us understand the employee perceptions of different organizational factors that impact employee turnover especially from the time an employee thinks of leaving the job to taking concrete actions related to a new job.

Organizational culture is a construct with varying definitions. The construct-theoretical in scope-has not been properly operationalized and studied in the research literature. For the purposes of this study, six components of organizational culture were studied: teamwork-conflict, climate-morale, information flow, involvement, supervision, and meetings. The Organizational Culture Survey was administered to 195 governmental employees in the Pacific Northwest. In addition to surveying the 195 employees, a representative sample of 91 of the employees were chosen to participate in a 45-minute interview. The interviews were coded along the six dimensions examined in the Organizational Culture Survey. The results of the Organizational Culture Survey revealed significant differences in the perception of organizational culture between the different divisions of the governmental employees. Employees at the top of the organization were satisfied with the organizational culture, whereas line workers, line supervisors, and clerical staff were dissatisfied on all the components of organizational culture that was measured. Additional themes of organizational culture emerged from the qualitative interviews. These themes include: (1) the belief that top management does not listen to, or value, employees, (2) an organizational culture of confusion due to limited interactions amongst departmental divisions, (3) meetings lacking interaction, (4) employees feeling uncertain about their job roles, and (5) supervisors providing subpar supervision and not recognizing exceptional employees.

Available at: [http://dx.doi.org/10.1016/S0145-2134(98)00005-2](http://dx.doi.org/10.1016/S0145-2134(98)00005-2)

Human service organizations rarely analyze the impact of intra-organizational and inter-organizational variables as predictors of overall organizational effectiveness. Both constructs are rarely integrated in research, and thus human service organizations cannot compare their relative effects on outcomes. The state-sponsored AIMS pilot project was initiated in Tennessee to increase service coordination. The study collected both qualitative and quantitative data over a three-year period in Tennessee. Services to 250 children provided by 32 public children’s service offices in 24 different state counties were examined. The study yielded four significant findings. First, significant improvements in children’s psychosocial functioning were apparent for children who were serviced by offices with more positive climates. Second, improved service quality does not
ensure additional positive outcomes for children. For example, removing a child from one problematic residential placement into a new residential placement does not ensure that the child will be devoid of any additional problems in a new environment. Third, organizational climate positively effects service outcomes and service quality. Lastly, this study found that increased service coordination often decreases service quality as caseworker responsibility can weaken when services are centralized.

This qualitative study assessed how factors impact employee retention and turnover in focus groups with 25 employees at different stages of employment: resigned case managers, case managers employed for less than one year and more than three years, and supervisors. Two broad themes emerged for retention: supportive environment (including themes relating to children/parents, co-workers, and the organization) and opportunities within the agency (including new positions, experience and knowledge and job security). Two broad themes emerged for turnover: organizational issues (including themes about low compensation, challenging work demands, and system issues) and stress. Workers expressed a strong desire to be heard by management. Several unique issues were identified, including workers’ desire for clear communication flow through hierarchies, increased collaboration, and revisions to the way data is used/integrated.

Available at: [https://doi.org/10.1080/23303131.2021.1932658](https://doi.org/10.1080/23303131.2021.1932658)

Lizano et. al put together a comprehensive framework / best-practices guide based on evidence-based research on the dimensions of well-being for Child Welfare workers. This guide covers research and definitions for dimensions of well-being. The three major well-being dimensions include: Physical; Psychological; Social. The Physical domain deals with general physical health, workplace safety, and secondary traumatic stress. The Psychological dimension is comprised of job satisfaction, psychological safety, work engagement/job burnout, and inclusion/equity. Finally, the social dimension houses peer relationships, supervisory relationships, and work-life effectiveness. The authors argue that child welfare agencies should incorporate this framework as a mechanism to combat worker turnover and create a supportive and equitable organizational culture for their child welfare workforce. The authors also challenge child welfare agencies to conduct ongoing assessments and data collection to gauge the well-being of their workers. Historically, turnover has been combated by an increase in recruiting and stress management of employees. Only by addressing organizational climate and individual factors can the child welfare workforce have a well-rounded answer to increase worker retention.

Available at: http://www.tandfonline.com/doi/abs/10.1080/15548732.2012.715267#.VGyjRMt0y70

This article sets forth a broad vision for the future of the Children’s Bureau that focuses on the goals of reducing maltreatment and achieving optimal health and development of children and families. To accomplish these goals the Children Bureau charts a path to strengthen the ability of States, tribes, and communities to offer a range of universal and effective services to families within a systems of care framework; improve public policy and financing of child welfare services; build public engagement in and support for systemic child welfare changes; and develop initiatives to strengthen and support the child welfare workforce.

Available at: http://dx.doi.org/10.1016/j.chiabu.2006.03.001

This is a summary article of Glisson, Duke, and Green’s (2006) randomized study of the Availability, Responsiveness, and Continuity (ARC) program on child welfare organizational culture, climate, and turnover of child welfare workers. The article highlights the saliency of this research in that it demonstrates one of the first strong links between organizational intervention in child welfare and child and family outcomes. The author highlights the important components of the ARC intervention, including the need to emphasize child welfare internal working capacity and the work environment over inter-organizational relationships with other community providers, which in previous research has shown to negatively influence service quality. The author encourages research to replicate Glisson’s work, and to compare outcomes for organizations, children, and families when implementing different models of organizational change.

Available at: https://doi.org/10.1016/j.childyouth.2019.104624

The high turnover rate of child welfare workers is a well-known and recognizable topic within research. Workers from child welfare agencies (N=214) participated in this study so that researchers could determine the relationship between transformational leadership style and the intention of employee turnover through mediating effects of organizational culture, climate, and commitment. Twenty items from the Multifactor Leadership Questionnaire (MLQ Form 5X; Avolio, Bass, & Jung, 1999) were used to measure the four dimensions of transformational leadership. One of the key findings was that local office directors’ transformational leadership styles had direct and negative effects on workers’ turnover plans/intentions. This study indicated that “distant leaders,” such as local office directors, can have an impact on worker turnover.
intentions; in this regard, these directors can have a role in dissuading workers’ intentions to leave the child welfare agency.

Available at: [http://www.tandfonline.com/doi/abs/10.1080/03643107.2012.669335#.VGykSct0y70](http://www.tandfonline.com/doi/abs/10.1080/03643107.2012.669335#.VGykSct0y70)

Challenges with social worker satisfaction and subsequent high staff turnover rates are not new to the profession. For decades researchers have studied social worker satisfaction from several perspectives, though generally with child welfare staff. This exploratory study examined responses from a statewide survey of 838 social workers across a broad spectrum of employment settings to determine which variables had the greatest impact on satisfaction. Standard multiple regression results indicate that social workers’ level of satisfaction with their jobs and employment benefits were best predicted by variables that translate into improved compensation. These findings suggest that efforts to improve social work satisfaction, and subsequently lower turnover rates, should focus on improving factors that directly or indirectly influence compensation to preserve this vital workforce. Limitations and next steps for future research are discussed.

Available at: [http://dx.doi.org/10.1016/j.childyouth.2010.02.004](http://dx.doi.org/10.1016/j.childyouth.2010.02.004)

Organizational culture and climate elements have not been extensively considered in the social welfare literature, especially in the domain of child welfare. This article addresses this gap by systematically exploring these factors and their effects on child welfare employee turnover. This exploration uses data collected by the New York State Social Work Education Consortium in 2002 and 2003. Organizational culture is organized by factors of achievement/innovation/competence, cooperation/supportiveness/responsiveness, and emphasis on rewards (ER). Organizational climate is classified by role clarity, personal accomplishment, emotional exhaustion (EE), and workloads. A logistic regression model was used to analyze a worker’s intent to leave his or her current job. Findings suggest that both organizational culture and climate factors, particularly ER and EE, are significantly related to a worker’s intention to leave. Thus, employees emphasizing the values of organizational culture and climate have less intention to leave their current positions. This is an indication that child welfare agencies may improve organizational culture and climate by appropriately addressing elements (i.e., reinforcing ER and minimizing EE).

This article examines the factors that can affect job satisfaction, organizational culture and climate, and intent to leave at a public child welfare agency. Findings from focus group data collected from direct line, middle, and senior managers revealed a passive defensive culture. The authors discuss concrete organizational interventions to assist the agency in shifting to a constructive oriented
culture through enhancements in communication, including supervision and shared decision making, recognition and rewards, and improvement in other areas related to working conditions.

Available at: http://www.gao.gov/products/GAO-03-357

This extensive report prepared by the GAO identifies the challenges child welfare agencies face in recruiting and retaining child welfare workers. Nearly 600 exit interview documents completed by staff who severed their employment from 17 state, 40 county, and 19 private child welfare agencies and interviews with child welfare experts and officials were primarily analyzed to get the results. The findings show that low salaries, in particular, hinder agencies’ ability to attract potential child welfare workers and to retain those already in the field. Other factors affecting retention are disparities in the salaries between public and private child welfare workers, high caseloads, administrative burdens, limited supervision, and insufficient training.

Available at: http://dx.doi.org/10.1016/j.childyouth.2012.02.010

High employee turnover continues to be a serious problem in the field of public child welfare. In a statewide study of public child welfare employees in a southern state, the Child Welfare Organizational Culture Inventory was used to assess employees’ perceptions of organizational culture and to examine which factors might be predictors of employee’s intentions to remain on the job as measured by the Intent to Remain Employed-Child Welfare scale. Logistic regression was used to examine the relationship between organizational culture and employees’ intent to remain in child welfare. These analyses provide a view into which employees might be at higher risk for leaving their positions and which organizational factors are contributing to the problems of high worker turnover.

Available at: http://www.tandfonline.com/doi/abs/10.1300/J147v30n04_04

This study examined long-term child welfare workers’ reasons and motivations for their job retention. Over three focus-group interviews, a sample of 21 child welfare workers and supervisors from urban, suburban, and rural areas were interviewed. Three major themes emerged to explain the sample’s continued employment in child welfare: movement, both beyond the boundaries of the agency and within it; importance of local management, including the need for professional and personal support from supervisors and local administrators; and educating novice workers, the need to adequately prepare and mentor new child welfare workers.

The study uses mixed methods to examine the impact of perceived organizational culture on workers’ intention to remain employed. Results indicated that intention to remain employed was significantly related to organizational culture. Results from the analysis of the open-ended survey questions and focus groups revealed two important dimensions of agency culture: values and agency relationships. Several respondents reported a desire for their personal and professional values to be congruent with the values of the agency. It was important to respondents that the agency mission was clear and consistent with their personal and professional goals. Respondents who intended to remain employed at their agency had a positive outlook on their work. They felt a need to serve others and believed the tasks they performed made a difference in the lives of the children, families, and communities they served. They believed they could impact positive change and felt a sense of accomplishment when they were able to see positive results of their work. Workers whose values were more congruent with their organizations’, as identified in higher scores on service orientation and satisfaction with the purpose and nature of work domains, were more likely to plan to stay at their jobs.

**PERSONAL FACTORS**

Available at: [http://ac.els-cdn.com/S0190740912001041/1-s2.0-S0190740912001041-main.pdf?_tid=40b94440-59a8-11e2-8ffd-00000aacb361&acdnat=1357659175_627c014d19164704e67bbdb8c51480b](http://ac.els-cdn.com/S0190740912001041/1-s2.0-S0190740912001041-main.pdf?_tid=40b94440-59a8-11e2-8ffd-00000aacb361&acdnat=1357659175_627c014d19164704e67bbdb8c51480b)

Previous studies focused on child welfare worker retention identify individual and organizational factors that influence one’s job satisfaction and likelihood of job turnover. This article extends this work further by examining how an employee’s perception of respect in the workplace influences their decision regarding whether they retain their position or turnover the job. Child welfare workers’ perceptions of respect in the workplace have largely been under-studied due to difficulties surrounding the operationalization and measurement of respect in human services. This study sampled 538 workers in 202 voluntary agencies in a northwestern city. A mixed methods design was implemented with respondents taking a survey of both open- and closed-ended questions and participating in focus groups. Qualitative analysis revealed that workers’ perceptions of respect in the workplace do influence their decisions regarding whether to leave an agency of employment. The research yielded five sub-themes of respect, including: (1) organizational support; (2) fair salary and benefits; (3) fair promotion potential; (4) adequate communication; and (5) appreciation or contingent rewards. Workers who scored the lowest on the quantitative Respect Scale were significantly more likely to intend to leave their current positions. Quantitative findings also
revealed that older employees were more likely to retain their positions, while employees with a social work degree were more likely to leave.

Available at: [http://dx.doi.org/10.106/j.childyouth.2011.08.033](http://dx.doi.org/10.106/j.childyouth.2011.08.033)

Research suggests that age and organizational factors are consistently linked with job stress, burnout, and intent to leave among child protection workers. However, no study has contextualized how age matters with regards to these adverse employee outcomes. This study conducted a theory drive path analysis that identifies sources of employment-based social capital, job stress, burnout, and intent to leave among two age groups. A statewide purposive sample of 209 respondents from a public child welfare organization in a New England state was included in the study. Results suggest that the paths to job stress, burnout, and intent to leave differed by age group. Social capital dimensions were more influential in safeguarding against job stress for older workers compared to younger workers. The results justify creating workplace interventions for younger workers that target areas of the organization where relational support could enhance the quality of social interactions within the organization. Organizations may need to establish intervention efforts aimed at younger workers by creating different structures of support that can assist them to better deal with the pressures and demands of child protection work.

The current study follows the finding from a previous study in which African American (AA) social workers were significantly less likely to report that they would remain in their CWS agencies than European American (EA) workers. Utilizing a mixed methods approach, the authors explored whether inequity from bias in CWS agencies related to ethnicity was a contributor to intentions to stay/leave. The results revealed no significant relationships between ethnicity and job satisfaction or intentions to stay in CWS agencies among EA, AA, or Hispanic/Latino (HL) workers. However, findings emerged related to worker perceptions of court duties concerning inequitable workloads and pay. Results indicated that job satisfaction and retention did not vary by worker ethnicity. Reports of bias related to ethnicity among the workforce in CWS agencies were rare. Perceptions concerning inequitable workloads were related to court work assignments.

The authors conducted a mixed-method study after a previous study of child welfare employees revealed a subgroup exhibiting surprisingly high levels of emotional exhaustion (EE) and job
satisfaction (JS). This subgroup included direct service workers, supervisors, and managers. As these findings appeared to conflict with previous studies, we re-reviewed the literature and undertook the current study to account for the co-existence of EE and JS. The authors explored and compared this subgroup with two others: workers who found their work satisfying without experiencing high levels of EE and those whose high levels of EE were associated with low JS. Using a survey that included several standardized measures with 226 employees and semi-structured interviews with a criteria-based subsample of 25, the authors explored the role that personality, career expectations, coping styles, stage of life, education, gender, and social networks play in outcomes for individual employees. Analyses of quantitative and qualitative data yielded a profile for each subgroup, offering insights into the subjective experiences of workers within individual, social, and organizational contexts. These findings have implications for recruitment, training, and support of child welfare workers.

Available at: [http://dx.doi.org/10.1080/01488370902900782](http://dx.doi.org/10.1080/01488370902900782)

This study explores the crisis involving increased staff turnover rates in child welfare agencies. The aim of the exploration was to determine which previously identified relevant variables (organizational, personal, and supervisory) are most related to a worker’s intent to leave urban and rural child welfare settings. A survey was administered to 447 employees in 13 agencies to address organizational, personal, and supervisory factors. Data analysis included ANOVA, logistical regression, and structural equation modeling. Organizational and supervisory variables were not found to be significant when data were applied to structural equation modeling. Results did suggest that career satisfaction and satisfaction with paperwork are key factors related to a worker’s intention to stay.

Available at: [https://doi.org/10.1177%2F1468017318757557](https://doi.org/10.1177%2F1468017318757557)

This article goes beyond looking at retention of Title IV-E graduates in public child welfare but delves into how stressors affect worker satisfaction in a longitudinal design. A total of 160 Title IV-E graduates from California were included in this study. Graduates completed surveys at three and five years after completing their work commitment in public child welfare. Only graduates who had both survey time points completed and were still employed in the public child welfare agency where they completed their work obligation were included. Paired t-tests showed that workload stress increased from year 3 to 5, but child-related stress was reduced. Regarding the satisfaction items, both client relationships and work life flexibility decreased from year 3 to year 5. In a regression analysis, workload stress at year 3 significantly predicted satisfaction with client relationships and work-life flexibility at year 5. In addition, women in this sample reported higher visit-related stress and African American graduates were more satisfied with their client relationships than their Asian American counterparts. The authors argue that workload stress is within agency control and can improve the worker’s satisfaction in their positions. Retention is not
the only outcome to consider when discussing caseworker longevity, since those who remain employed but are overcome with workload stress may affect the quality of their work with clients.

Available at: [http://dx.doi.org/10.1016/j.childyouth.2017.05.007](http://dx.doi.org/10.1016/j.childyouth.2017.05.007)

Recognizing experiences of newly hired child welfare caseworkers, including satisfactions and stressors, may reflect strategies to improve their transitions in their roles as they evolve, and enhance worker retention efforts. Satisfactions are elements of the role that workers like, enjoy, and/or appreciate, whereas stressors are aspects that workers did not like and typically cause undue pressure or frustration. Both satisfactions and stressors identified in this study were aligned with those discovered in prior research. Occasionally, satisfactions and stressors coincide. Interactions with children and families generated the greatest job satisfaction. Interactions with people related to making a difference in their lives and promoting a safe, more functional environment. Knowing that one’s decisions impacted people’s lives proved rewarding to workers. Flexibility of scheduling and uniqueness of each workday, freedom, and flexibility of managing cases, and variety within one’s role were considered positive. By contrast, stressors associated with caseworkers’ positions included: administrative requirements (rules and regulations) for required paperwork and documentation; redundancy and excessiveness of paperwork; large, demanding caseloads and consistent flow of new cases; challenges of balancing time on novel cases with demands of already-opened cases; long hours; complex family needs combined with limited community resources; problematic, unsupportive colleagues (administrators, supervisors, and coworkers) in the workplace; collaborating with hostile, unengaged parents and hurt children; and witnessing various forms of child maltreatment. Concurrently addressing satisfactions and stressors may prove effective for caseworker retention and precluding turnover. Finding methods to ensure that caseworkers see positive outcomes of their work and enjoy autonomy and variety in their positions is essential to prolonging worker satisfaction and reducing stress. Mentorship from colleagues and supervisors may promote continued productivity. Implications for future research are highlighted.

**ORGANIZATIONAL/PERSONAL FACTORS**

Available at: [http://dx.doi.org/10.1080/03643107.2012.676610](http://dx.doi.org/10.1080/03643107.2012.676610)

This study compared the influence of personal and organizational factors on intention to leave among 2,903 public child protection caseworkers and supervisors residing in urban, small-town, and rural counties in Texas. Although geographical location was not found to be a predictor of intention to leave, underlying factors that may influence and explain the differences between urban, small-town, and rural employee’s intention to leave were identified. Social workers residing in urban areas were more likely to have a master’s degree and be members of a racial/ethnic minority group, while social workers in small-town counties were older and had longer tenure in their agencies.
This review examines research into job satisfaction in child welfare systems and on other factors that influence a worker’s decision to leave a job or stay, including organizational climate factors. Studies reviewed in this article report that the most satisfying work environment is one in which staff engage in self-actualizing work with clients, are encouraged to achieve, experience feelings of accomplishment, work collaboratively with their colleagues, and enjoy trust and permission to express anger appropriately. Motivational factors such as salary and working conditions can be individualized depending on the needs of employees. Studies that focus on factors affecting the decision to stay or leave report that workers who remain in their child welfare positions despite burnout and other negative factors are those who come to the work with a sense of personal and professional mission, who have been well-matched in their positions, or who have the flexibility to move to more suitable positions as their interests and needs change, and who enjoy supportive relationships with supervisors who relate to them in a consultative manner. Supervisors, who can promote trust; foster good communication; encourage input into decision making, creativity, and innovation; engage staff in goal setting; clearly define roles; improve cooperation; and maintain open systems that are capable of taking in and responding to new information have a significant and positive impact on organizational climate.

This research examines the relationship of organizational climate to commitment for child welfare workers in private, non-governmental organizations. Four hundred forty-one workers in three not-for-profit agencies under contract with the public child welfare system were asked to complete two surveys, used to determine agency investment and perception of work environment. The results show that Autonomy, Challenge, and Innovation subscales were significantly associated with agency investment. This indicates that worker perceptions of having job autonomy, feeling challenged on the job, and the organization’s degree of innovation predict greater job commitment.

This study reviews results from a 5-year longitudinal study of public and private child welfare workers in one state. Data from 460 new workers were collected at four different time points (baseline, 6 months, 12 months, and 18 months) with specific topics varying among the time points. Data regarding the reasons they took their jobs and chose to work in the child welfare field, their commitment to their agencies and child welfare, and the worker’s demographics were compared with whether the workers were still in their positions at two years after their hire date. Results show
that public agency workers endorsed slightly higher levels of commitment on three of the four commitment variables in contrast to private workers, and their reasons for taking the job varied. Variables that predicted staying on the job were having viewed the state’s Realistic Job Preview before taking the job, good supervision, and higher job satisfaction.

Available at: http://dx.doi.org/10.1080/15548732.2016.1232210

This mixed methods study used a snowball sample (n = 54) to capture retrospective insight from former public child welfare workers about job satisfaction and reasons they left their positions. Responses to open-ended questions suggested a theme of lack of organizational support as the primary reason they left. Former workers also reported that they wanted a voice and someone to hear their concerns, greater recognition, and opportunity to practice self-care. Quantitatively, workers in their positions 8 years or longer were the most satisfied on a 19-item global scale examining job satisfaction. Respondents were unhappy with their workloads and emotional impact of their positions.

In this article, the researchers sought to extend the understanding of child welfare worker turnover beyond workers’ intent to leave, to include specific job and work withdrawal behaviors. Six hundred and twenty-one child welfare workers from across one mid-Atlantic state participated in the study, which consisted of an online self-report survey. Independent variables included perceptions of organization/environment, personal and job factors, and attitudinal responses. Dependent variables included job withdrawal, work withdrawal, job search behaviors, and exit from the organization. Research results state that organizational climate, particularly work stress, most directly contributes to job and work withdrawal, job search behaviors, and organization exit.

Available at: http://www.sciencedirect.com/science/article/pii/S0190740914000681

Using longitudinal data collected over a 10-year period from a statewide sample of all new public child welfare caseworkers hired between 2001 and 2010 (N=9195), this study examines personal and organizational factors that affect length of employment among child welfare workers and explores how personal and organizational factors influence caseworker length of employment. The findings of this study suggest that a mixture of personal and organizational factors influenced the length of time that child welfare workers remained with the agency. Of the variables evaluated in the models, gender, social work education, Title IV-E involvement, organizational support, and job desirability were shown to significantly influence longevity with the agency.

Available at: http://dx.doi.org/10.1080/01488376.2015.1101047

Job burnout is prevalent in child welfare with turnover rates estimated between 20% and 40% nationwide. Although effective leadership has been shown to facilitate positive job attitudes and low job burnout in many industries, including healthcare organizations, limited research exists examining whether transformational leadership affects job burnout and job attitudes among child protective services (CPS) case managers. Moreover, no research exists examining whether job burnout mediates the relationships between transformational leadership and job attitudes. This study was designed to examine the relationships between transformational leadership, job burnout, and job attitudes among CPS case managers and whether job burnout mediates those relationships. Bass's theory of transformational leadership and Maslach's theory of job burnout provided the theoretical frameworks for this study. In this nonexperimental study, 197 CPS case managers (83% women) participated by completing an online survey. Results indicated that transformational leadership and job burnout correlated with each other and with job attitudes as hypothesized, and job burnout partially mediated the relationships between transformational leadership and the criterion variables. Our findings suggest that child welfare organizations should hire and/or train transformational leaders to reduce job burnout and increase job attitudes among CPS case managers. Directions for future research are discussed.

The authors provide an overview of the causes and effects of workforce turnover in child welfare, which has been a persistent problem for more than four decades. Causes of workforce turnover are categorized into three areas commonly cited throughout the relevant literature: individual factors (e.g., burnout), supervisory factors (e.g., supportive supervision), and organizational factors (e.g., job satisfaction). In comparison to the causes of workforce turnover, empirical research on the effects of such turnover in child welfare is limited. This paper explores the need for innovative empirical knowledge regarding the link between workforce turnover and outcomes in the field of child welfare. The literature concludes with consideration of the gaps and inconsistencies in previous research and related implications for the social work profession, education, and practice.

UNIVERSITY/AGENCY PARTNERSHIP

Available at: http://dx.doi.org/10.1016/j.childyouth.2012.04.013

This study compared MSW trained child welfare workers and those with other educational backgrounds on objective tests of child welfare knowledge and two additional specific knowledge
areas. The authors further distinguished MSW recipients by those who participated in Title IV-E stipend-based programs and those who did not participate in such programs. Results show that those workers with MSW degrees score higher on the objective knowledge tests than their colleagues with differing degrees. Furthermore, workers with MSW who participated in a Title IV-E stipend-based program scored higher on the standardized tests than their counterparts who did not participate in these programs.

This study explored a Texas university/agency partnership program to prepare social work students for public child welfare. The results of the outcome study showed that more than 79% of the BSW stipend students were hired upon completion of the internship. Fifty-six percent of those who were hired stayed beyond their commitment and the length of employment ranged from one to nine years.

Available at: [http://dx.doi.org.10.1016/j.childyouth.2013.07.006](http://dx.doi.org.10.1016/j.childyouth.2013.07.006)

This study examined the career paths of 415 Title IV-E MSW graduates in one state retrospectively over 180 months post-graduation to discover factors that could be important in affecting retention in public child welfare agencies. The Title IV-E educational program is designed to be a retention strategy at the same time as it is a professionalization strategy. We surmised that perceived organizational support (POS) contributes to retention by acknowledging the workers’ needs for career development support. The median survival time for these child welfare social workers was 43 months for the first job and 168 months for the entire child welfare career. The initial analysis showed steep drops in retention occurred at 24-36 months post-graduation, approximately at the end of the Title IV-E work obligation. Upon further examination, Kaplan-Meier tests showed organizational factors relevant to workers’ professional career development predicted retention. Having access to continuing education and agency-supported case-focused supervision for licensure were correlated with retention at the 24–36-month post-graduation mark. At 72 months post-graduation, promotion to supervisor was a significant factor found to encourage retention. Being a field instructor for MSW students and being promoted to a managerial position were not significantly related to retention.

This qualitative study conducted 37 focus groups over four years with approximately 550 Title IV-E MSW students. The most frequent themes centered on direct practice: students emphasized direct practice as the most frequently mentioned strength of the curriculum as well as the most frequently mentioned weakness. Anxiety and apprehension about the emotional challenge of social work emerged as a theme.

This study examined the factors that affect the retention of specially trained social workers in public child welfare positions. Two hundred and thirty-five Title IV-E funded MSW graduates completed the survey instrument. The findings showed that the level of emotional exhaustion, salary, percentage of work week spent doing court related tasks, and the extent to which respondents receive support from work peers and supervisors were significant factors that influenced graduates who remained in public child welfare employment and those who left or planned to leave public child welfare jobs. Worker burnout was the number one reason for leaving child welfare jobs.

This study surveyed 289 alumni of a specialized Title IV-E program that prepares undergraduate social work students for careers in public child welfare, examining factors such as turnover rates, adherence to strengths-based practice principles, perceptions of work conditions, and intent to stay. Findings indicate that graduates of this program were less likely than other caseworkers to leave their positions. Most maintained adherence to strengths-based practice principles, reported
satisfaction with the work, felt supported by colleagues, and intended to stay in the field of child welfare. Based on alumni comments, ways that agencies can retain such workers are suggested.

Available at: http://books.google.com/books?hl=en&lr=&id=ua=HgAVEPolwC&oi=fnd&pg=PA67&dq=Finding+and+keeping+child+welfare+workers:+effective+use+of+training+and+professional+development&ots=gHVAassaj9&sig=svKJDgBy8vxZJkYP8KcwHANK4#v=onepage&q=Finding%20and%20keeping%20child%20welfare%20workers%3A%20effective%20use%20of%20training%20and%20professional%20development&f=false

This article describes an evaluation of the Kentucky Public Child Welfare Certification Program (PCWCP) designed to recruit excellent workers from BSW programs who are prepared to take on complex cases with normal supervision within weeks of employment and to sustain those workers over time. The results of the pilot study show that agency supervisors consider the graduates to be better prepared to handle complex cases much sooner than other new employees including BSW graduates, less stressed and more confident, more skilled in interaction with clients, more knowledgeable of agency policy and procedures, and much more positive in their attitudes about the agency and their job.

Available at: http://books.google.com/books?hl=en&lr=&id=T5D7xDmLEhoC&oi=fnd&pg=PA69&dq=Child+welfare+knowledge+transmission,+practitioner+retention,+and+University+community+impact:+A+study+of+Title+IV+E+child+welfare+training&ots=B6ErsvKx2&sig=Q07yfcpxZu8HcAvlT7GljXP23qY#onepage&q=Child%20welfare%20knowledge%20transmission%2C%20practitioner%20retention%2C%20and%20University%20community%20impact%3A%20study%20of%20Title%20IV-E%20child%20welfare%20training&f=false

This study compares child welfare knowledge of Louisiana’s MSW and BSW Title IV-E stipend students with non-stipend students using a quasi-experimental design. The study found that on a test of child welfare knowledge, students in MSW and BSW programs scored higher following child welfare training.

This retrospective study examined the retention rates of a Title IV-E program’s graduates in a public child welfare agency. The sample size used was 266. The study found that Title IV-E trained social workers were more likely to have remained employed for a longer period than non-IV-E trained employees. Other important predictors were Spanish speaking, having an MSW, and being rehired by the agency.

Available at: http://digitalcommons.library.tmc.edu/jfs/vol12/iss1/9

This study examines administrative data from the state of Texas regarding the impact of social work education provided by Title IV-E stipend programs on better case outcomes as defined by the Child and Family Services Review, which includes recurrence of child maltreatment, reentry into foster care, stability of foster care placements, length of time to reunification, and length of time to adoption. Results did not show a significant difference between Title IV-E stipend program participants and other participants with social work degrees for the first three case outcomes. However, there was a significant difference in improved outcomes for reduction in the recurrence of maltreatment, stability of foster care placements, and reduction in time for adoption for those with a social work degree compared to those with other educational backgrounds. A significant difference between Title IV-E stipend program participant and those with other social work degrees was seen in the length of time for reunification.

Available at: http://www.profdevjournal.org/articles.102016.pdf

This study was conducted in conjunction with a federally mandated qualitative study to evaluate a newly developed university/agency Title IV-E education program. This paper reviews findings from a qualitative design used to ascertain Title IV-E participants’ experience in the MSW programs and their opinions of the educational cohort model implemented in this partnership. Results show that Title IV-E MSW participants were able to immediately incorporate what they have learned in the classroom into their casework practice. Knowledge gained through core social
work courses were beneficial to Title IV-E participants through acknowledging how these values and skills are implemented in their child welfare practice, gave them insight into how policy and political processes affect child welfare, and encouraged them to use the concepts of strengths perspective, collaborative practice, and empowerment to advocate for child welfare involved families. In addition, participants felt that the opportunity to obtain the MSW strengthened their commitment to child welfare work. Title IV-E program participants valued the cohort model of their MSW education because it allowed them to interact with other child welfare workers from different agencies and different levels of casework (e.g., supervisors and administrators). The cohort model enabled the Title IV-E participants to gain a better understanding of different aspects of casework and provided them with a peer support network. Title IV-E participants appreciated the opportunity to showcase their transfer of learning by applying names to the skills and techniques they have been using in their casework practice. The study also detailed supports and stressors reported by the Title IV-E participants. The stressors were to be used to further enhance the Title IV-E educational program and delineate the expectations for each group of stakeholders (e.g., the university, the agency, and the Title IV-E student).

Available at: http://qsw.sagepub.com/content.9/2/227.full.pdf+html

University-agency partnerships are on strategy in training, and ultimately retaining, public child welfare workers in the field. California’s Title IV-E MSW graduates are surveyed in this study to compare and contrast the experiences of students who decided to stay in the field and those who ultimately decided to leave. Surveys were mailed to the MSW graduates within six months to one year of students having completed their work obligation. Students completed the survey, indicated if they would like a follow-up interview, and mailed the surveys back to the graduate-level student researchers. The interviews were conducted over a ten-year span, beginning in 1999 and ending in 2005. 791 graduates completed the survey and 386 chose to participate in an in-person or telephone interview. Of the students interviewed, 78.6% chose to stay in the field of public child welfare while 21.2% expressed that they’d be leaving or have already left. Although both “stayers” and “leavers” expressed satisfaction with their program and a feeling of preparedness for the work, the “stayers” had greater access to buffers and experienced the benefits of working in supervision and a positive work environment. “Stayers” were also more likely than “leavers” to report promotion and entry into supervisory roles. The “leavers” reported exiting the field due to a lack of support and respect from supervisors and other staff, high levels of stress, difficulties transferring within or between counties, and other personal/familial obligations and duties. While both “stayers” and “leavers” experienced stressful working conditions, the “stayers” were more likely to discuss the buffering forces (e.g., quality supervision) that helped them alleviate the stress and persevere through challenges.
A survey design was used to find if all BSW programs in 1998-1999 were using Title IV-E funds to provide support for students who would agree to work in public child welfare programs after graduation. Out of 464 schools that were sent a questionnaire, 282 programs returned the questionnaire. The study found that of the schools that responded, 48 received Title IV-E funding for BSW students. Program directors were asked if they included child welfare content in the curriculum. About one-fourth of the programs said they had a child welfare course as required; fifteen percent had child welfare courses as electives; only 4 percent required child welfare courses for all students; 20% had combination of the above; and the rest of the programs (34%) had no child welfare content in their courses.

Available at: http://www.ncbi.nlm.nih.gov/pubmed.12705464

This study of 73 MSW graduates from 1993-1996 and 32 survey respondents assesses the extent to which IV-E MSW graduates remain engaged in child welfare following completion of their employment obligations to the IV-E program. The study found that “the vast majority of graduates funded by IV-E dollars became employed in and stayed in child welfare services, and that these social work-educated social workers are actively involved in shaping the practice, policies and administration of child welfare services.”

Available at: http://books.google.com/books?hl=en&lr=&id=uaHgAVEPolwC&oi=fnd&pg=PA35&dq=Do+collaborations+with+social+work+make+a+difference+for+the+field+of+child+welfare%3F+practice,+retention+and+curriculum&ots=gHVAastcdd&sig=FmRXC0M0YBVSgsBuriN4CIW146w#v=onepage&q=Do%20collaborations%20with%20social%20work%20make%20difference%20for%20the%20field%20of%20child%20welfare%3F%20practice%2C%20retention%20and%20curriculum&f=false
This article provides three areas of evaluation of a partnership between a school of social work and a state department of child protective services. The first study determines the impact and success of the Title IV-E program from both the students’ and the larger community’s perspective. The findings of surveys administered to both MSW Title IV-E students and to supervisors and administrators of Texas Department of Protective and Regulatory Services (TDPRS) showed that approximately 50% of students agreed that their master’s education had improved their skills and relationship with their employers, community, and the profession. Administrator survey results showed 47% agreed that MSW’s have a better ability to use various interventions with clients than do bachelor-level employees. The second study determined the retention of Title IV-E participants in the agency. The study found that the reasons to remain employed at CPS were commitment to work, flexible schedule, and increase in professionalism. Salary was reported as the most frequent reason for leaving CPS. The third study determines the current level of child welfare content in MSW curricula. The study found that 60% of respondents stated that there should be more emphasis on child welfare content in the future. The findings of the three studies suggest that Title IV-E funding is essential to the specialized training and education needed by child welfare workers.

Available at: [http://dx.doi.org/10.1016/j.childyouth.2012.07.016](http://dx.doi.org/10.1016/j.childyouth.2012.07.016)

In this article the history of the U.S. Children’s Bureau in developing and professionalizing child welfare services is summarized along with a literature review regarding the relationships between professional preparation and outcomes in service delivery, job performance and preparedness, social work values, and retention of staff. In addition, results from an evaluation study including longitudinal data from 10,000 child welfare workers in Texas are discussed. A major finding from the evaluation is that significant differences exist between the experiences and perceptions of those with social work degrees and those workers with different educational backgrounds.

**RETENTION STRATEGIES**

Available at: [http://books.google.com/books/about/Report_from_the_Child_Welfare_Workforce.html?id=u4kVHAAACAAJ](http://books.google.com/books/about/Report_from_the_Child_Welfare_Workforce.html?id=u4kVHAAACAAJ)

Forty-three (43) states and 48 counties from seven states with locally administered child welfare agencies participated in this study. The study employed survey methodology. Findings from state data indicate that (1) vacancy rates are low among staff groups; (2) annual staff turnover rates are high for all groups except supervisors; (3) annual preventable turnover rates are high for all staff groups except supervisors; (4) the median percentage of all preventable turnovers in FY 2000 was
very high; (5) the impact of vacancies on agencies is compounded by required pre-service training and phased-in caseload policies; (6) the dimensions and factors involved in staff recruitment are varied, complex, and widespread; (7) while states have implemented many strategies and approaches in response to recruitment problems, there are no “magic bullets” or “quick fixes;” (8) preventable staff turnover problems are complex, multi-dimensional and widespread; (9) states have implemented many strategies and approaches to deal with preventable turnover problems, but their effectiveness has been modest; (10) there is a gap between the states’ rate recruitment and retention problems and their implementation of strategies to address such problems; (11) “softer” strategies (e.g., in-service training, and educational opportunities) for addressing staff preventable turnover are important; (12) some states are successful and reported that their recruitment and/or preventable turnover situation improved in FY 2000; (13) state have many ideas about actions that should be taken by agencies to recruit and retain qualified child welfare service workers; (14) significant amounts of data are missing from some survey responses. In comparison, county responses indicate that: (1) vacancy rates are relatively low for all staff groups and are lower than state vacancy rates for all staff groups; (2) annual county staff turnover, like state staff turnover, is quite high for all staff groups except for supervisors; (3) annual county preventable turnover rates are very low for all worker groups; (4) the median percentage of all preventable turnovers in the counties are between 27% and 47% for all worker groups except supervisors; (5) counties and states responding to the survey view the factors involved in staff recruitment problems in a similar way; (6) like states, responding counties have implemented many strategies and approaches to lessen recruitment problems, but similarly have not found “magic bullets” or “quick fixes;” (7) counties rates preventable turnovers as less problematic than states did; (8) like states, counties have implemented many strategies and approaches for addressing preventable turnover problems, but their rates effectiveness is higher than states’; (9) counties also see “softer” strategies as important for addressing preventable turnover; (10) county child welfare agencies are somewhat more likely to seek additional resources from county boards as a result of the workforce crisis than states did with governors/state legislatures; and (11) the extent of change experienced by counties was somewhat more positive than states.

Available at: [http://rsw.sagepub.com/cgi/reprint/18/6/565](http://rsw.sagepub.com/cgi/reprint/18/6/565)

Based on current research of the causes of preventable turnover and theories related to organizational change, an intervention was designed to reduce turnover in public child welfare agencies. The intervention included three components: management consultations, capacity building for supervisors, and an intra-agency design team (DT). The DT intervention was a team of agency representatives who used research and critical thinking to identify and remedy causes of turnover in a particular agency. The DT members included the agency that has members representing units such as foster care and child protective services. The members were at several levels of the agency’s hierarchy, including frontline caseworker, senior caseworker, supervisor, director of services, and deputy commissioner. True buy-in and endorsement from the County
commissioners was essential to giving DT the authority to collect and review data and testing creative solutions. Preliminary results from four systems in the DT intervention study indicate that from wave 1 (2002) to wave 2 (2005), the nonintervention systems showed no significant improvement of 3% on intention to leave. At wave 1, 81% of the employees identified an intention to leave, while 78% indicated intention to leave at wave 2. On the other hand, the systems that received the DT intervention improved significantly by 22% from 76% down to 54%.

A national qualitative study explored recruitment and retention strategies within state child welfare agencies and the perceived effectiveness of such strategies. The study explored 50 state child welfare websites and conducted interviews with 18 individuals across 13 states. Findings suggest that agencies struggle with heightened turnover rates despite continuing identification and implementation of comparable types of recruitment and retention efforts. Nationally well utilized and underutilized strategies to alleviate recruitment and retention challenges are discussed, as well as mechanisms for overcoming these obstacles and promoting innovation. Creativity, new strategies, and other innovative forces have been important factors in improving recruitment and retention in other fields (e.g., nursing).

High annual turnover (20–50%) reflects the challenging nature of child welfare frontline work. This article considers Lipsky’s (1980) concept of street-level bureaucracy to explain workers’ workplace transition. We conducted in-depth interviews with 38 newly hired, frontline workers. A thematic analysis revealed discrepancy between worker expectations and job reality. Workers felt unprepared for the job given quick transition periods and unfamiliar agency procedures. Additional field training, agency-specific training, caseload protection, and workplace supports could improve worker transition and reduce turnover.

A great deal of research literature has been devoted to turnover and burnout regarding child protection workers. This qualitative, longitudinal study examines resilience among these workers regarding workforce retention. The researchers utilized semi-structured interviews to interview 24 direct service child protection workers in Queensland, Australia. Several factors were examined including issues of adversity faced by the workers and how workers developed and maintained
resilience within the field. The study suggested that resilient workers are committed and have enthusiasm for the work regarding achieving positive outcomes for children and families. Relationship-based and reflective practice were recognized as being significant to resilience in child protection workers. A relational-reflective framework for resilience was created based on the study’s results which captured several factors (CPW resilience, reflective processes, relationships, and organization) and how they related to one another regarding resilience. In the authors’ view, adding resilience to organizational culture can positively impact children and families’ outcomes as well as direct service workers.

This study reviews a clinical consultation model that was developed and tested with child welfare supervisors in public and private agencies in a large urban municipality over a three-year period. The project involved existing university-child welfare partnerships, faculty from six social work schools, and the child welfare system. Evaluation methods included pre and post self-assessment instruments, a consumer satisfaction questionnaire, and follow-up measures at the three- and 15-month post-program participation points. Data demonstrated significant increases in the self-assessment scores from the pilot study (year one) to year two. Intervention fidelity remained consistent across years two and three, with statistically significant changes in self-assessment scores in each year. Findings suggest that the clinical consultation model offers a tool for professional development decision making that is transferable to comparable large cities and child welfare systems with similar staff/client numbers.

Available at: [http://dx.doi.org/10.1016/j.childyouth.2010.06.007](http://dx.doi.org/10.1016/j.childyouth.2010.06.007)

This article focuses on the effects of an organizational intervention on intention to leave child welfare. It is one of only two studies of its kind. A non-equivalent comparison group design was used with 12 child welfare agencies participating in either the Design and Improvement Teams (DT) intervention condition or in a comparison condition. Pre and post intervention assessments of the organizational factors and intention to leave took place. No significant interactions were noted for the organizational variables of workload, salary/benefits, and rewards. Findings do indicate significant interactions for three organizational variables (professional resources, commitment, and burnout) and intention to leave. All these interactions showed a greater positive improvement for the DT group than the comparison group. A good model of fit demonstrated with pathways leading from the intervening organizational variables to intention to leave. Interventions at the organizational level could help child welfare agencies improve organizational shortcomings, positively affect perceptions of burnout, role clarity, and job satisfaction, decrease intentions to leave, and improve service quality.

The Western Regional Recruitment and Retention Project (WRRRP) addressed recruitment, selection, and retention issues in five rural and urban sites in the greater Rocky Mountain region—Colorado, Arizona, and Wyoming. Multiple training curricula and other resources were developed to attend to cross-site issues. Comprehensive organizational assessments were conducted using quantitative and qualitative methods to assess the agency, the worker, and the job. This information was used to create a strategic plan addressing the conditions that impact recruitment, selection, training, and retention. Each site interpreted the information from the organizational assessment, developed sites’ specific strategic plans of needs, priorities, and training intervention strategies. Throughout the five-year project, WRRRP staff provided support, technical assistance, and training. Evaluation activities were conducted throughout the project’s life to assess process and outcome results and to provide on-going assessment to make mid-course corrections. A major finding of the outcome evaluation was improved retention for caseworkers, supervisors, and aides. A qualitative finding of note was the importance of good supervision in retaining workers. The authors also note that no single intervention will resolve the problems of ineffective recruitment and retention a multi-pronged approach addressing recruitment, selection, training, and retention is necessary.

This is a systematic review of 25 different research studies that focus on the retention of child welfare workers. The review aimed to address the question of the primary “conditions and strategies that influence the retention of staff in public child welfare.” The authors found that the most consistent characteristics related to retention were individual’s level of education, supervisory support, and worker caseload. The authors highlight the value of Title IV-E educational initiatives to recruit invested workers in pursuing advanced degrees in social work, and the negative impact that role overload and burnout have on retention. Recommendations are to increase the rigor and amount of research that is conducted in this area and to create a clearinghouse to regularly disseminate information about effective strategies in retaining workers and improving services that child welfare workers provide.

Curry, A. (2019). “If you can’t be with this client for some years, don’t do it”: Exploring the emotional and relational effects of turnover on youth in the child welfare system. *Children and Youth Services Review, 99,* 374-385.

Available at: [https://doi.org/10.1016/j.childyouth.2019.01.026](https://doi.org/10.1016/j.childyouth.2019.01.026)

Turnover among child welfare workers is a serious and well-documented problem. One of the reasons it is particularly troubling is that it disrupts relationships between young people in care and
their child welfare professionals. These relationships have the potential to provide support to and enhance outcomes for youth who arguably already have a considerable history of relationship loss. To date, scholarship has focused primarily on the causes and remedies of turnover, instead of the effects. This study explores the lived experience of turnover from the child's perspective, adding an important and underrepresented voice in the literature. The findings presented in this article originate from a two-year, multi-perspective, multi-method qualitative study exploring relationships between young people in care and their child welfare professionals. Youth narratives reveal that turnover: happens frequently; is often abrupt and poorly processed; occurs with all their child welfare professionals; and is a relationship loss. These losses were found to impact the emotional and relational well-being of youth in a variety of complex ways. Practitioners, supervisors, administrators, researchers, and policy makers alike will find the child-centered and relationship-based approach to turnover discussed in this article, important and timely.

This article describes findings from a mixed-methods study of specialized training in cultural competence knowledge, attitudes, and skills for experienced caseworkers in public child welfare. Training participants were recruited through local child welfare agencies; while a sample of convenience, participants reflect the state-wide child welfare workforce’s educational background. One hundred and forty participants attended the training and completed pre and post-test measures of knowledge, skills, and awareness of culturally competent practice (adapted from Goode, 2003). Initial findings indicate that training can have an impact on participant’s knowledge of cultural competence. Study findings also show that participants believe this new knowledge positively affects how they and their coworkers practice with families.

This study examined the experiences and opinions of child welfare workforce turnover and retention of youths in the child welfare system, explored the relationship between the number of caseworkers a youth has had and the number of the youth’s foster care placements, and harnessed the suggestions of youths in resolving the turnover problem. Youths in the child welfare system (N=25) participated in focus groups and completed a small demographic survey. Findings suggest that youths experience multiple effects of workforce turnover, such as lack of stability; loss of trusting relationships; and, at times, second chances. The article concludes with suggestions for caseworkers, state trainers, local and state administrators, and social work researchers on engaging with youths in relationships that facilitate genuine systems change around social work practice and the child welfare workforce crisis.

Case managers play a significant role in the child welfare system. Although previous studies have highlighted the multiple demands and requirements for case managers, few studies have utilized the perspective of case managers to highlight practices and areas of need within the child welfare system. The purpose of this qualitative study was to expand the understanding of issues related to child welfare by exploring the perspectives of current and former child welfare case managers. Thirty-one case managers provided their perspectives on their experiences within the child welfare system, perspectives and views of the system, relationships with other parts and persons within the system, and how they developed their knowledge of the intricate child welfare system. Themes related to the roles and responsibilities of case managers, support, and collaboration, and learning and growing within the system emerged. Practice, research, and policy implications are discussed.

This study of 129 child welfare workers at the six-month follow-up found that the opportunity to perform new tasks and post-training peer support were important factors explaining training transfer. The results of this study suggest that greater involvement by trainees in the training process may positively influence child welfare workers learning of new skills and their ability to transfer them back to the practice setting.

<sup>41</sup> The CWEB Academic Coordinator position was vacant throughout much of FY ‘20/21 with a faculty search being conducted. In the interim the responsibilities were covered by Dr. Cahalane and Rachel Winters, M.A. Ms. Winters received a 20% supplemental payment for the additional duties she acquired during this time. The position was filled by Dr. Brooke Rawls as of July 19, 2021.
