

JOB DESCRIPTIONS:

1. [PennEnvironment Campaign Associate:](#)

Join the PennEnvironment team to help tackle the existential crisis of our lifetime: climate change. Pennsylvania has a long-standing history of fossil fuel extraction and currently has one of the largest carbon footprints in the U.S. It's also one of the most-watched states politically in the nation.

As PennEnvironment's Campaign Associate in our Climate Solutions program, you'll be working in the belly of the beast to advocate for reducing Pennsylvania's reliance on dirty fossil fuels and fracking, while promoting the clean energy alternatives at our fingertips like wind and solar power.

You'll work alongside our experienced staff to press for Pennsylvania to commit to 100% renewable energy through advocacy and lobbying, working with the media, collaborating with partner groups and state leaders, and mobilizing citizen support for our campaigns to solve climate change. Together, you'll be part of PennEnvironment's effort to make Pennsylvania a leader in the fight against climate change and leave behind its history being a big part of the problem.

2. [Environment New Jersey Campaign Associate \(Philadelphia or New Jersey\):](#)

The most powerful tool to protect our water quality is to stop pollution before it happens. This concept — antidegradation — is enshrined in the Clean Water Act, and nearly 50 years after its passage, we still need to protect our waters so they are fishable and swimmable. That is why Environment New Jersey is running a campaign to advocate for stronger protections for the lower section of the Delaware River to allow for primary contact, including swimming, targeting a regional agency. New Jersey's waters are hidden gems — and we need to keep them that way. We are seeking a Campaign Associate who will spearhead this campaign and work with our experienced team of advocates, researchers, and digital and communications experts.

3. [PennPIRG Public Health Associate:](#)

Join the PennPIRG team, led by Advocate Emma Horst-Martz, on our cutting-edge campaigns to protect public health in Pennsylvania. From threats in the marketplace such as the overuse of antibiotics on factory farms, cancer causing pesticides sold to farmers and gardeners alike, makeup made with toxic chemicals and flavored tobacco products marketed to teens, to system wide issues like lead in school drinking water and sky-high prescription drug prices, there are numerous threats to Pennsylvanians' health.

The PennPIRG team will also continue advocating for improved access to testing and Personal Protective Equipment as necessary following the first year of the COVID-19 pandemic.
